Safety in Power Transmission

TORQUE LIMITERS - CLUTCHES

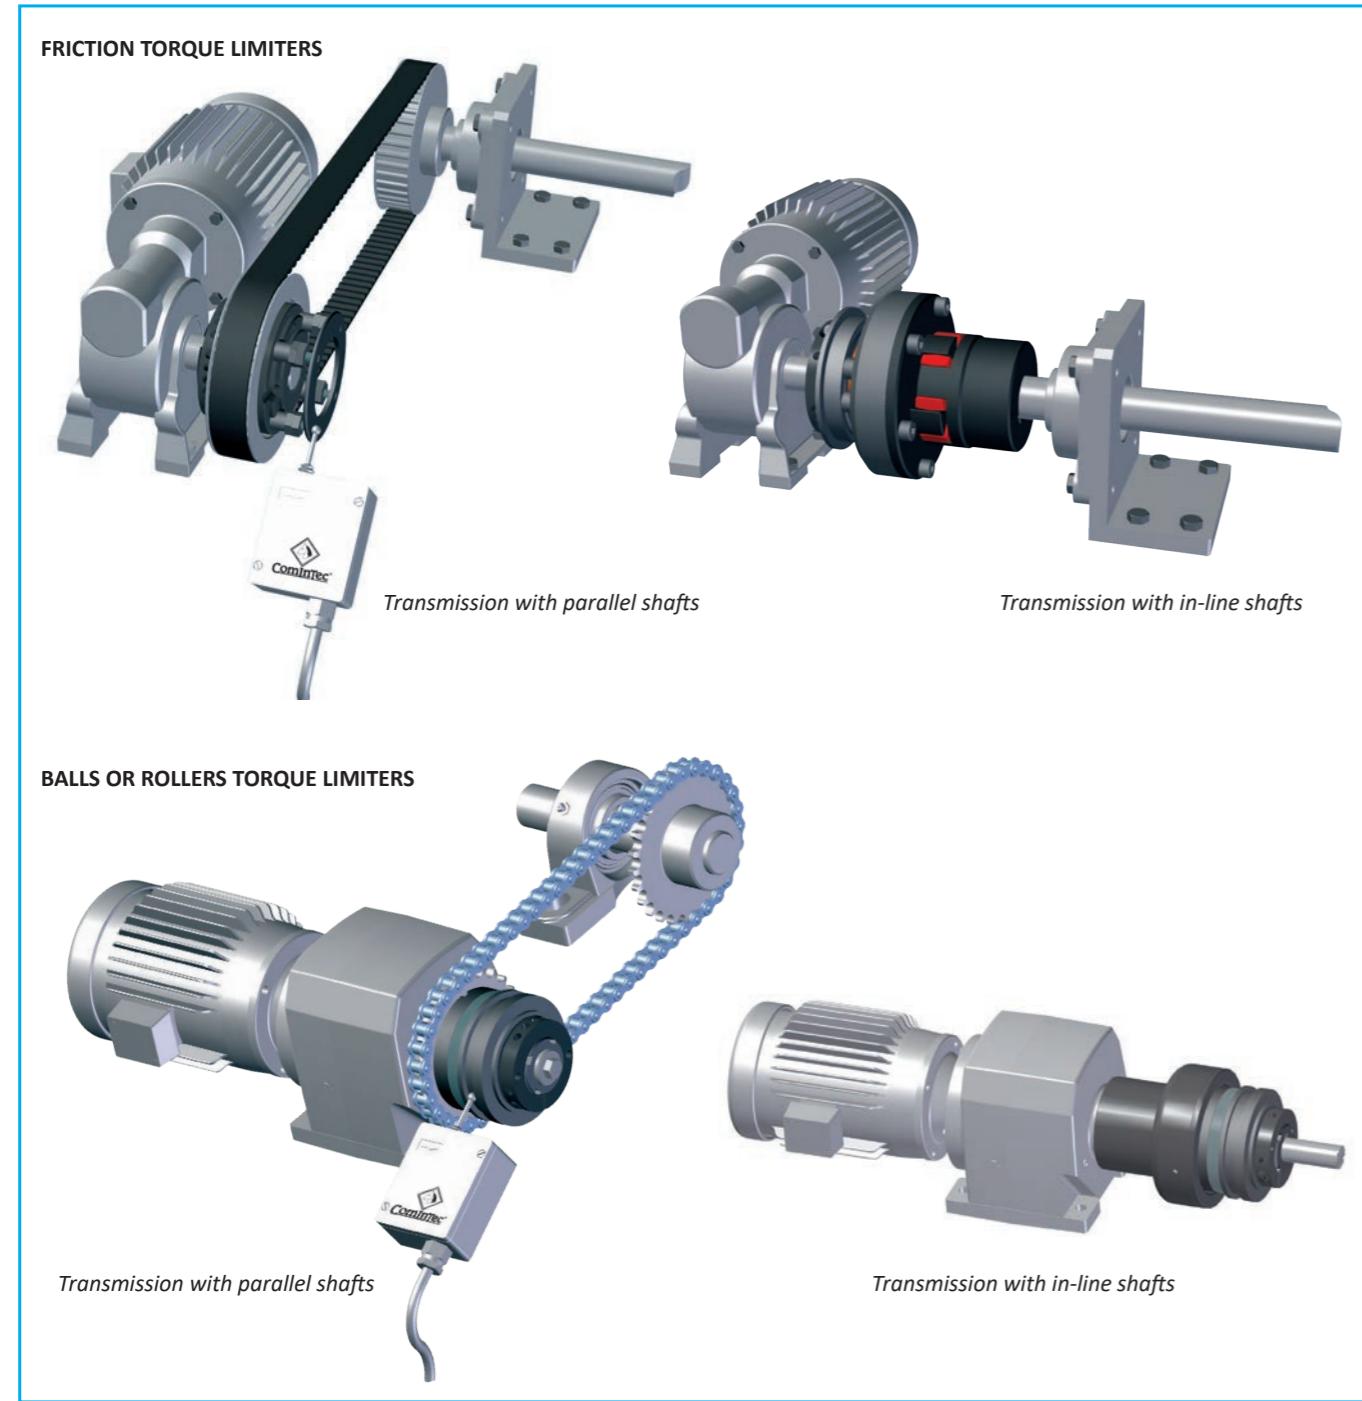

up to 120 KNm and 260 mm bore diameters

SUMMARY CHARACTERISTICS

Model	Function	Torque	Max bore	Speed	Main characteristics	Sensitivity
DF	friction	1 ÷ 23000	140	medium - low	economic solution	medium - low
EDF/F	mechanical	7,5 ÷ 1450	55	medium - low	compact solution with balls in phase	medium - high
DSR	mechanical	10 ÷ 12000	120	medium - low	with rollers in phase or equidistant	medium - high
DSS/SG	mechanical	0,8 ÷ 1200	50	medium - high	backlash free with balls in phase or equidistant	high
DSR/SG/RF	mechanical	5 ÷ 1300	65	medium - high	backlash free rotation 	medium - high
DSM	mechanical	200 ÷ 120000	140	high	free rotation for high speed	medium - high
DSS/F/SG/PR-V	mechanical	3 ÷ 720	48	medium - high	compact solution for gearbox	medium - high
DSS/SG/RF/PR-V	mechanical	5 ÷ 1300	65	medium - high	compact free rotation solution for gearbox 	medium - high
DF/TAC/PR-V	friction	1 ÷ 2800	55	medium - low	economic and compact solution for gearbox	medium - low
DSA	mechanical	30 ÷ 4700 N	-	medium	axial limitation	medium - high
DSR/F/AP	pneumatic	7 ÷ 30000	120	high	mechanical roller clutch	high
DSF/TF/AP	pneumatic	3 ÷ 875	65	medium - high	friction clutch	medium

ASSEMBLY EXAMPLES

FRICTION TORQUE LIMITER up to 23 KNm and 140 mm bore diameters

DF - friction torque limiter: introduction

- Simple and economic friction torque limiter.
- Suitable for dusty conditions without need of timing between gearbox and output.
- Silent overload without vibration.
- Protection in both rotation directions.
- Asbestos-free friction discs.
- Simple and precise torque setting by adjusting the locking ring.
- Innovative calibration system by "H dimension" for an immediate calibration of the device.
- ON REQUEST**
- Complete with transmission gear, fully turned and mounted (plate wheel, pulley, gear pair).
- Possibility of connections with bore and keyway, locking assembly or other locking systems.
- Different types of friction discs for specific applications.
- Anti-corrosive surface treatments or stainless steel version for special requirements.

Sliding safety coupling where a plate wheel, pulley or other transmission component is interposed between two friction rings. Upon reaching the torque sliding ensures continuity in the transmission without damaging the components. The minimum to have a low cost protection.

MAIN APPLICATIONS

- Forming machines.
- Conveyors.
- Automotive.
- Agricultural machines, woodworking machines.

ADVANTAGES AND BENEFITS

- Protects the motor-gearbox in case of accidental collision.
- Protects the film of wrapping machines in case of higher tension.
- Absorbs static torques without disengaging.
- Protects the gear in case of short product jam.

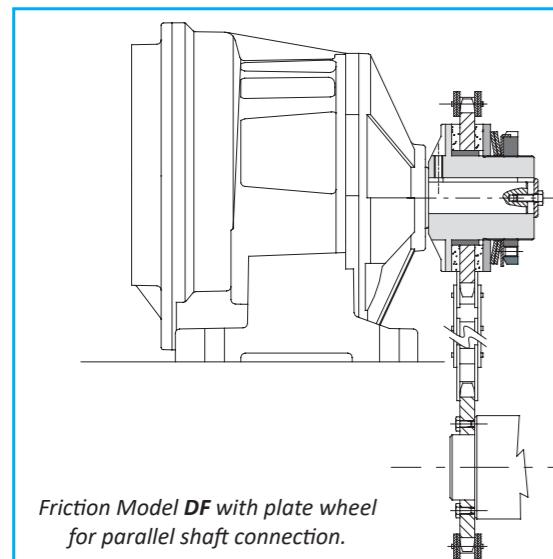

FRiction RINGS

- STD (standard): friction rings used for the torque values indicated in the catalogue. Optimum performance ratio torque / life.
- ▲ LD (long life): same performance in torque respect std friction rings life greater than 5 times.
- ▲ LDX (extra long life): life greater than 150 times respect standard friction rings, but performance in torque reduced by of 70% (until size 3,115 DF).

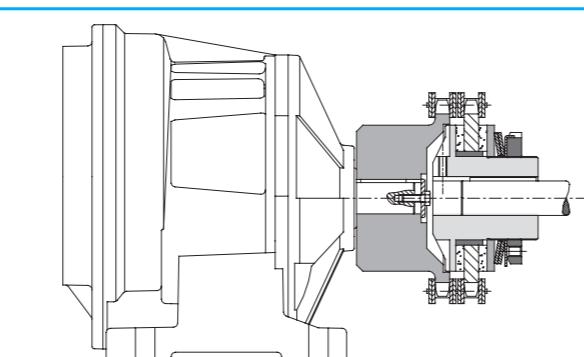

▲ On request

	DF: Basic model for parallel shaft transmission, with plate wheels, gear pairs or pulleys.	From 1 to 23,000 Nm 140 mm max bore	Pag. 9
	DF/TAC: in-line shaft connection, simple and economic.	From 1 to 23,000 Nm 160 mm max bore	Pag. 10
	... + GAS: in-lineshaft connection with elastic coupling with high misalignments.	From 1 to 7,000 Nm 125 mm max bore	Pag. 11
	... + GEC: in-line shaft connection with compact elastic coupling.	From 1 to 15,000 Nm 160 mm max bore	Pag. 11

APPLICATION EXAMPLES

Friction Model DF with plate wheel for parallel shaft connection.

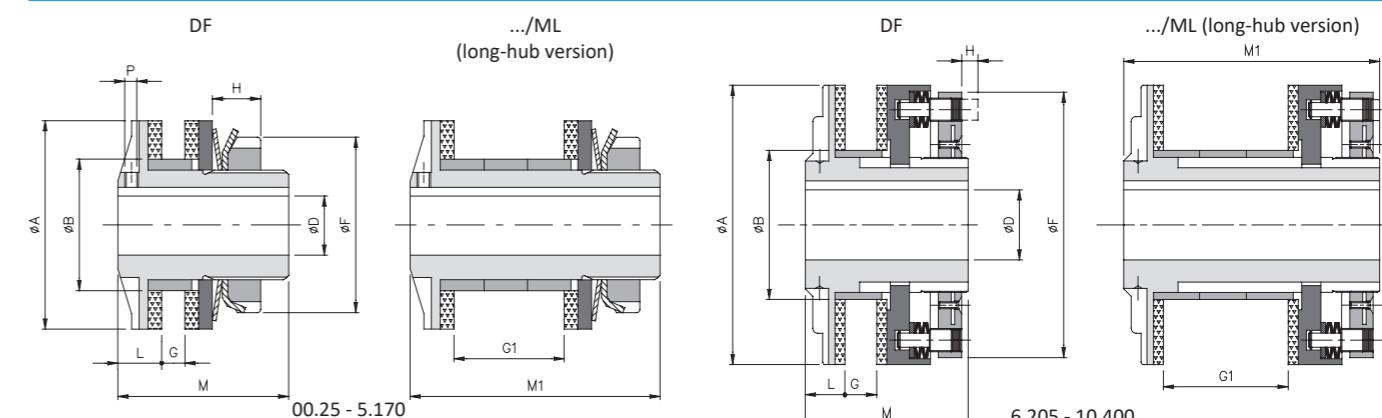

Friction Model with chain coupling DF/TAC for in-line shafts connection.

DF - friction torque limiter: technical data

- Simple and compact solution.
- Version with coil springs for fine adjustment (from gr.0.50 to gr.3.115): .../CM.
- Available in stainless steel version: DF-SS.
- Available with customized alignments ("L") interchangeable with other models on the market.
- Available with radial ring statically balanced (from gr.00.38 to gr.5.170): .../GR.
- Torque range from 1 to 23 KNm; max. bore ø140 mm.

NOTES

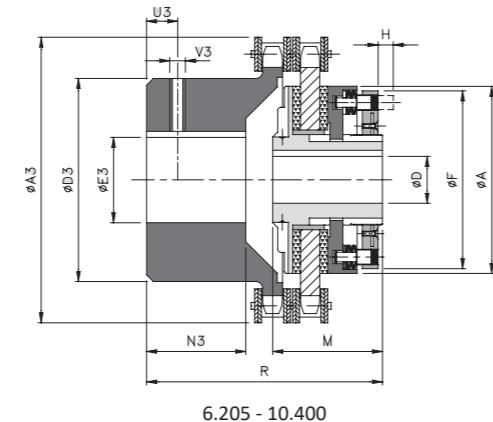

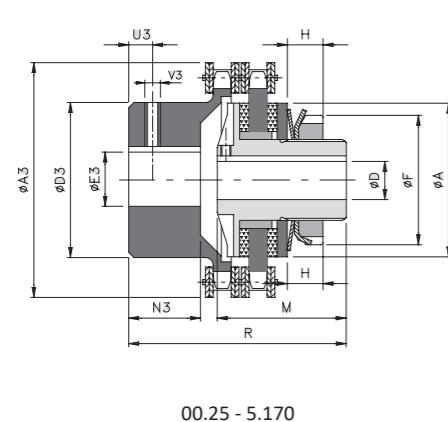

- P *: On the size 00.25 the grub screw is located on the nut side, not on the flange side.
- Weights are relevant to the torque limiter with pilot bore (DF), inertias refer to the maximum diameter for finished bore.

▲ On request

.../TAC - version with chain coupling: technical data

- Simple and compact solution for transmission with in-line shafts.
- Protection in both rotation directions.
- Possibility of different types of friction discs for specific applications.
- Version with coil springs for precise and fine adjustment of the torque: .../CM/TAC.
- Available with radial ring statically balanced: .../GR.
- Torque range from 1 to 23.000 Nm; max. bore Ø160 mm.

DF - friction torque limiter: additional information

.../CM: minimum torque version (with GR ring mut)

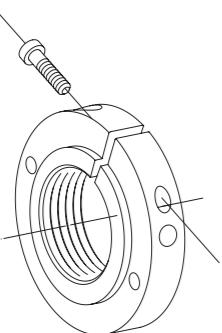

Helical springs execution, for a wider torque range and consequently a finer adjustment on calibration is possible.

Size	Torque [Nm]		A	M1
	spring ST	spring SQ		
0.50	4,5 - 11	-	50	57,5
1.70	2 - 34	2 - 60	70	85
2.90	5 - 56	3 - 70	90	95
3.115	10 - 130	25 - 160	115	113

.../GR: model with radial ring

Ring with radial locking statically balanced alternative to the grooved nut GT standard. Available from size 00.38 to 5.170.

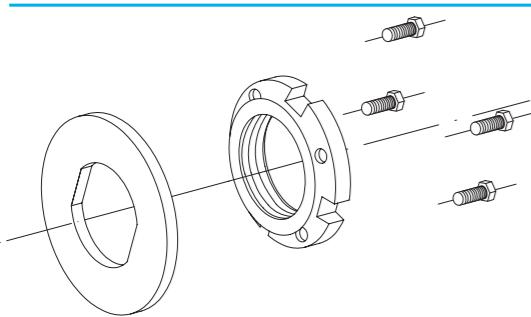

For size 00.38 - 5.170 DF

GT/DR KIT: kit for double registration matching to the nut with notches GT

Torque adjustment system with double registration (with flange and hex head screws) for high sensitivity and precision calibration, also with belleville washers.

For size 1.70 - 5.170 DF

DF - friction torque limiter: additional information

PLATE WHEELS

The driving part selected (plate wheels, pulleys, gears, and so on) to be incorporated into the friction torque limiter, must adhere to predetermined characteristics (ex. the surface in contact to the friction rings with roughness $R_a=0,8 : 1,6$) to ensure good performance. In the table below, there are standard plate wheels in ComInTec's production (supplied already grounded) which can be assembled on the torque limiter; and the minimum chain passage "V" (see picture 3), necessary for the correct sizing of the plate wheel to avoid contact between the chain and outside diameter of the limiter. It is possible to assemble various types of plate wheels, but the surfaces must be machined, and the chain passage cannot be smaller than this value. Another aspect to take into consideration to ensure the dimension of the assembly is correct, is the element thickness and its relevant bush "N" (see picture 1). We suggest to obtain a quote "N" equal to $[S + G + W]$. Comparing "N" value obtained, to the N_{std} indicated on the table, which corresponds to the standard length of the bushes, you can have: " $N < N_{std}$ " (picture 1 - ex.A) → reduce the bush width to quote "N". " $N > N_{std}$ " (picture 2 - ex.B) → machine the driving part at a diameter of " $A+1$ " and a depth equal to "x" ($N - N_{std}$).

Example "A" (see picture 1)

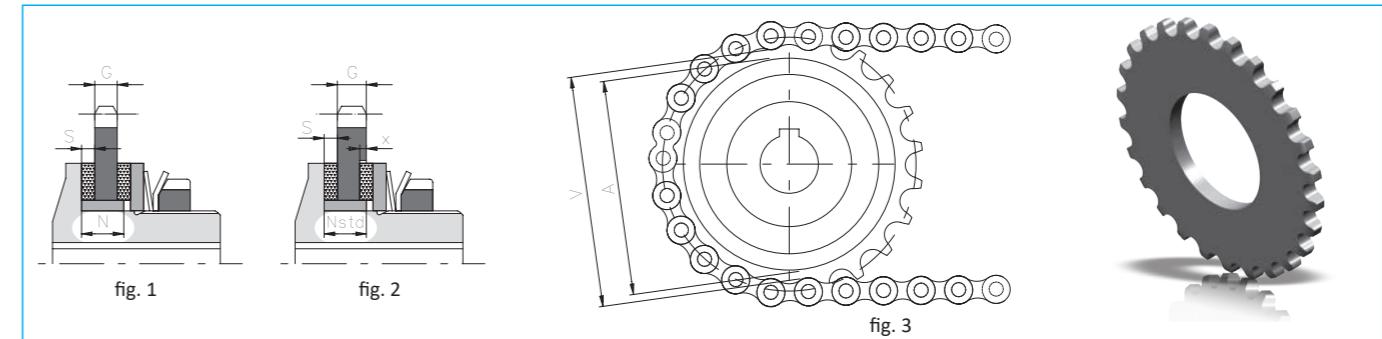

1.70 with plate wheel #7
 $G = 7 \text{ mm}$
 $S = 4 \text{ mm}$
 $N = S+G+W = 4 + 7 + 1,5 = 12,5$
 $N_{std} = 15$
 Reduce the bush width to 12 mm.

Example "B" (see picture 2)

1.70 with plate wheel #13
 $G = 13 \text{ mm}$
 $S = 4 \text{ mm}$
 $N = S+G+W = 4 + 13 + 1,5 = 18,5$
 $N_{std} = 15$
 Machine $\phi 71$ with depth (value "x" = $18-15 = 3$)

where:

p = pitch [in]
 G = thickness of the ground element
 z = teeth number
 dp = pitch diameter
 S = thickness of the friction ring
 N_{std} = thickness of the standard bush
 N = thickness of the calculated bush ($S+G+W$)
 A = outside diameter of the torque limiter
 V = inside diameter of the chain
 x = depth of the machining ($N - N_{std}$)
 W = min useful assembly for 2° friction ring
 = 1 (0,025 ÷ 0,50 DF)
 = 1,5 (1,70 ÷ 7,240 DF)
 = 2 (8,300 ÷ 10,400 DF)

■ SENSOR CONNECTION EXAMPLE

To maximize the lifetime of the friction rings and maintain the performance of the limiter, you should promptly stop the drive as soon as the first slip occurs. This is possible using the model DF combined with a micro-switch (model EM1) or an inductive sensor (model PRX), see page 69.

If this is not possible, however, we suggest the use of an inductive sensor connected to a tachometer or frequency inverter in order to reveal the possible speed change of a metallic mass connected to the organ of transmission, as shown in the example below.

14

■ ORDER EXAMPLE

- If the version of DF/TAC state both finished bores (on the limiter and pinion TAC).

Size	Model	Version	Bore T.L.	Bore coupling	Torque / Spring

ECONOMIC BALL TORQUE LIMITER

up to 1,450 Nm and 55 mm bore diameters

- Download catalogue
- Download instruction sheets
- Download 3D and 2D cad model

EDF

EDF/F - economic ball torque limiter: introduction

- Reduced torsional backlash by ball drive.
- Maintenance free for long lasting, high reliability.
- Version with 360° phase re-engagement available.
- Model available only with plate wheel or other transmission component.
- Innovative calibration system by "H dimension" for an immediate calibration of the device.
- Possibility of combining a microswitch / proximity to stop the drive.
- Suitable for use in damp and oily environments.

ON REQUEST

- Complete with drive component or personalized plate wheel.
- Possibility of connections with locking assembly or other types of locking.
- Possibility of surface treatments for corrosion-specific needs.
- Personalized version with re-engagement in phase at 30°, 45°, 60°, 90°..

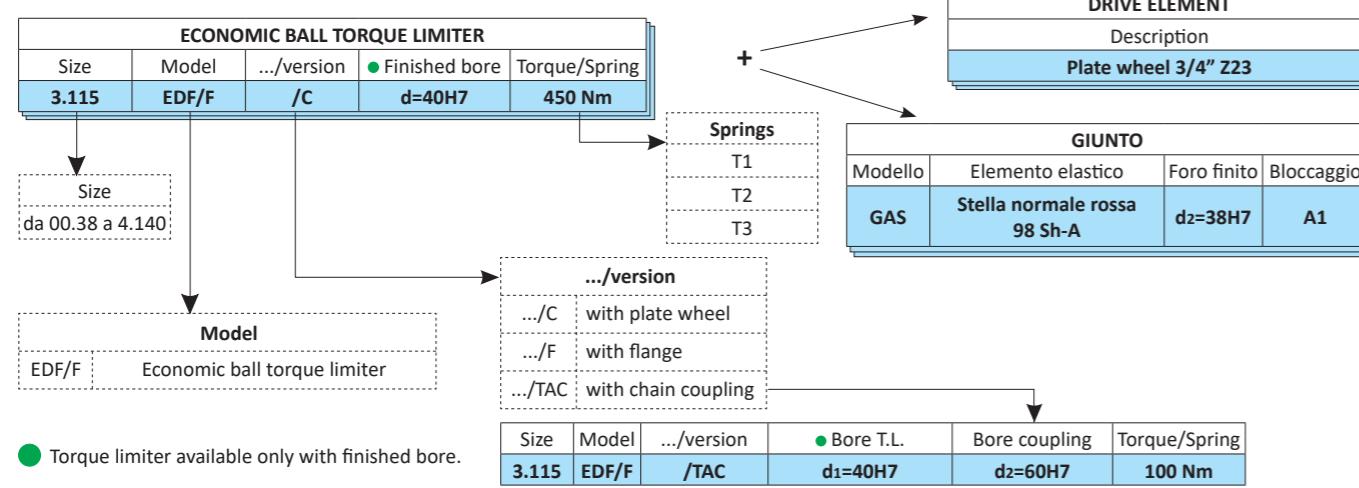

Safety coupling with the transmission of motion by means of hardened balls inserted directly in the drive element, obtaining a simple, compact and competitive device. The disengagement occurs quickly and safely allowing the stop of the transmission if the calibrated torque is exceeded.

	EDF/F: basic model for drive with platewheel or pulley, with parallel shafts	from 7,5 to 1450 Nm 55 mm max. bore	Pag. 17
	EDF/F/TAC: in-line shaft connection, simple and economic	from 7,5 to 1450 Nm 80 mm max. bore	Pag. 18
	EDF/F/GAS: coaxial connection with elastic coupling.	from 7,5 to 940 Nm max. 80 mm bore	Pag. 18

MAIN APPLICATION

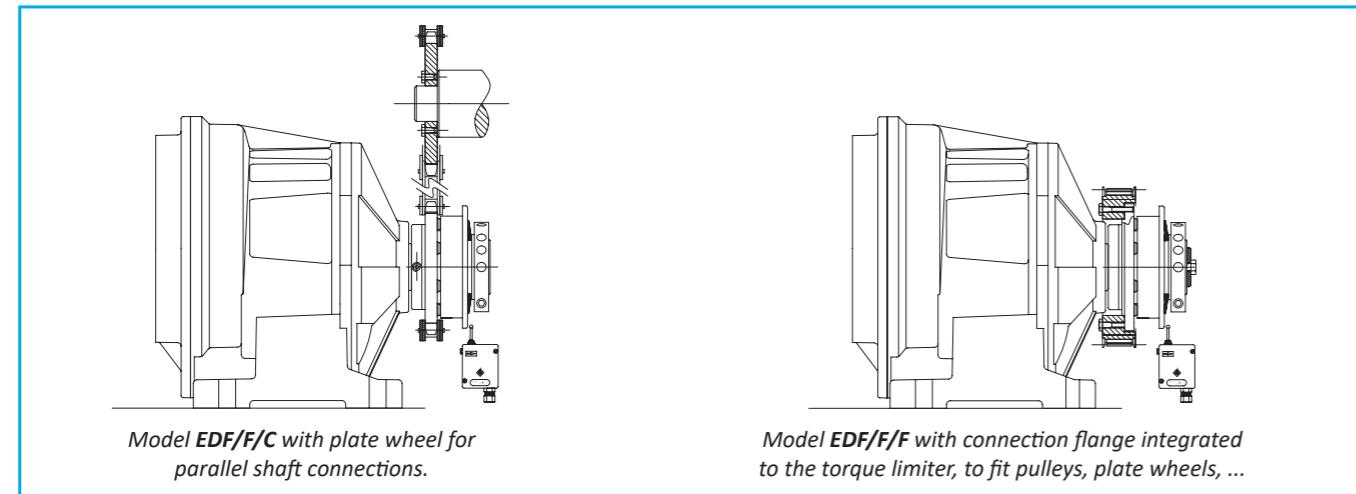

- Filling machines.
- Metal chip conveyors.
- Automatic conveyor belts.
- Winches.

ORDER EXAMPLE

● Torque limiter available only with finished bore.

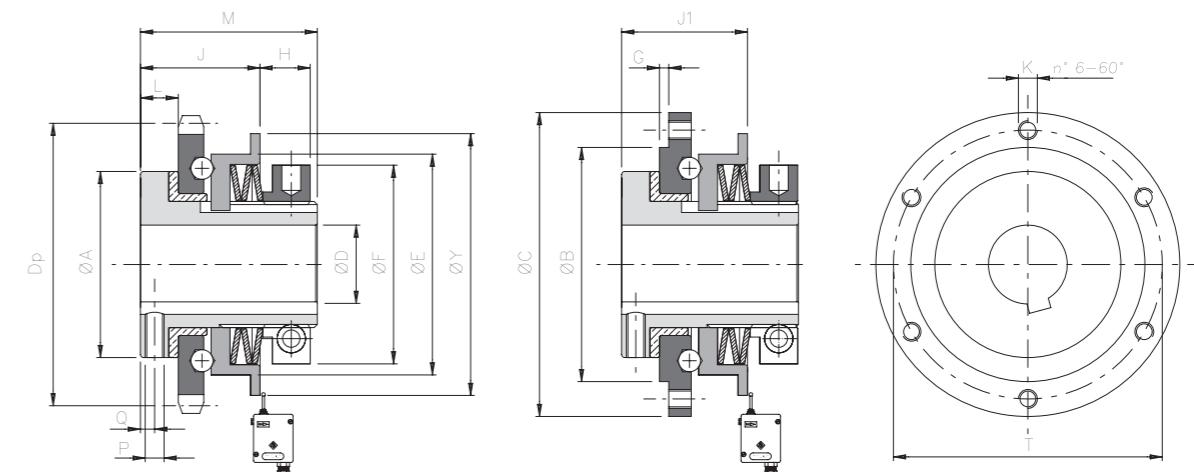

APPLICATION EXAMPLE

EDF/F - economic ball torque limiter: technical data

- Mounting of the drive organ within the device similar to the friction series.
- Automatic re-engagement after the restoration of transmission.
- Available with radial ring statically balanced
- Model with flange for custom links: EDF/F/F.
- Model available only with finished bore.
- Torque range from 7.5 to 1,450 Nm; max. bore Ø55 mm.

.../C (version with plate wheel)

.../F (version with flange)

NOTES

- Weights are relevant to the whole group with pilot bore
- EDF / F + GAS: (torque and misalignments) *: The data refers to the standard red elastomer 98 Sh-A. The weights refer to the coupling application only.
- For Torque limiter data see on page 17
- Microswitches EM1 and inductive sensor PRX see page 69

ROLLERS TORQUE LIMITERS

up to 12 KNm and 120 mm bore diameters

- Download catalogue
- Download instruction sheets
- Download 3D and 2D cad model

DSR - rollers torque limiter: introduction

- Precise torque setting by adjusting the radially balanced locking nut.
- Innovative calibration system by "H dimension" for an immediate calibration of the device.
- Equidistant re-engagement in phase or at 360°.
- Available with electromechanical switch / proximity for the transmission disconnection.
- Immediate intervention for an improved reaction compared to electronic systems.
- Maintenance-free for long lasting high reliability.
- Suitable for oily and wet environments.
- ON REQUEST
 - Complete with transmission gear, fully turned and mounted (plate wheel, pulley, gear pair).
 - Possibility to use helical springs for low intervention torques.
 - Connections with bore and keyway, locking assembly possible.
 - Version with personalized re-engagement in phase 36°, 45°, 60°, 90°, 120°, ... possible.

Safety coupling with the transmission of motion through rollers that allow complete disengagement when the calibrated torque is reached permitting a quick stop of the transmission due to micro-EM1. Suitable for transmitting high torque with high reliability and compact size.

MAIN APPLICATIONS

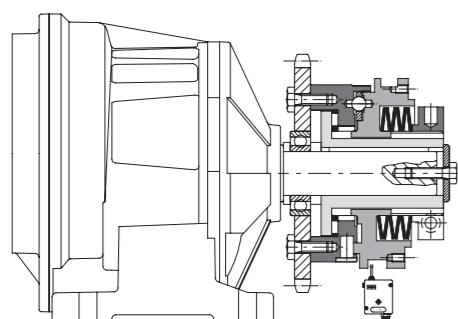

- Packaging and wrapping machines.
- Labelling machines.
- Bottling machines.
- Conveyors.

ADVANTAGES AND BENEFITS

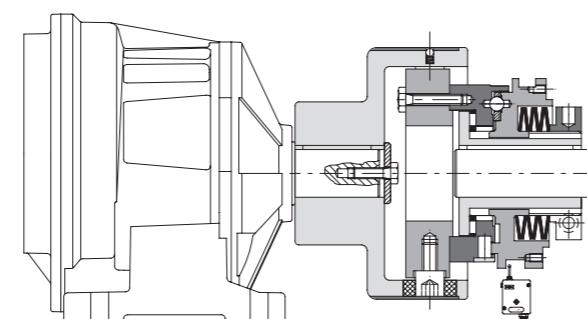

- Protects the gearbox from jamming due to foreign matters.
- Protects packages from squashing and deforming.
- Protects the product handling elements from accumulations.
- Maintains the timing between driver and driven after an overload.

	DSR: Basic model.	from 2,5 to 12.000 Nm 120 mm max bore	Pag. 23
	... / FS: suitable for the mounting of simple transmission.	from 2,5 to 12.000 Nm 120 mm max bore	Pag. 24
	... + GTR: connection with torsionally rigid coupling.	from 2,5 to 2.600 Nm 90 mm max bore	Pag. 25
	... + GAS: connection with flexible coupling with high misalignments.	from 2,5 to 7.000 Nm 130 mm max bore	Pag. 25
	... + GEC: connection with flexible coupling with reduced misalignment.	from 2,5 to 12.000 Nm 180 mm max bore	Pag. 26

EXAMPLE OF ASSEMBLY

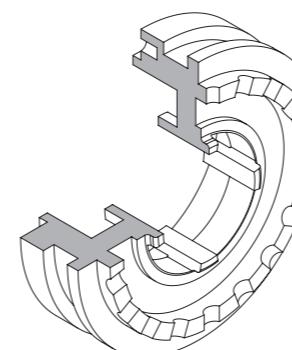

Model DSR (or DSS) with organ supported by a bearing
Transmission parallel shaft.

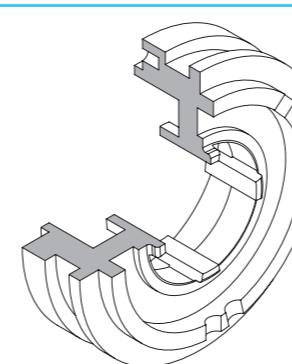

Model DSR (or DSS) with elastic coupling compact GEC
for transmissions to coaxial shafts.

DSR - rollers torque limiter: models

DSR: Roller torque limiter for steady transmission with high torques and vibrations

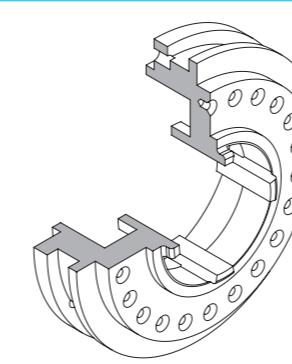

- Roller transmission.
- Equidistant automatic re-engagement.
- High torque settings at reduced dimensions.
- Same intervention torque in both directions.
- Torque range from 10 to 12,000 Nm; max. bore ø120 mm.

DSR/F: Roller phase torque limiter, synchronised connection between input and output.

- Roller transmission.
- Optimized roller arrangement (patented) with perfect stability and 3 point contact.
- Automatic re-engagement in phase 360° or personalized (36°, 45°, 60°, 90°, 120°, ...)
- High torque settings with compact dimensions.
- Torque range from 10 to 12,000 Nm; max. bore ø120 mm.

The safety devices ComInTec with reengagements in "phase" are characterized by a unique distribution of the rollers that represents the mathematically optimal solution to have a secure support balanced in all possible positions within 360°. When the limiter disengages, there are always at least three equally spaced rollers that rest on the rolling surface.

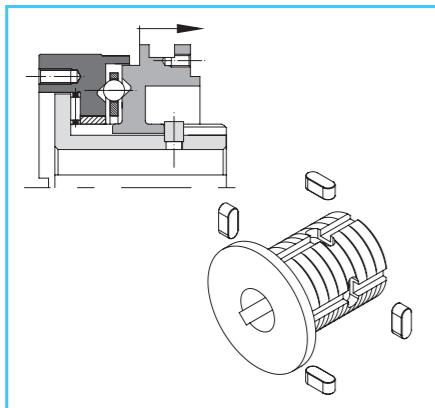

DSS: Ball torque limiter with optimum sensitivity in case of sudden torque variations (ON REQUEST)

- Ball transmission.
- High sensitivity and immediate intervention in case of minimal torque variation.
- Equidistant automatic re-engagement.
- Same intervention torque in both directions.
- Torque range from 2.5 to 2,050 Nm; max. bore ø68 mm.

NUMBER OF RE-ENGAGEMENTS IN 360 DEGREES

Model	Size							
	0.56	1.90	2.110	3.130	4.160	5.194	6.240	7.280
DSR	18	18	16	16	16	24	24	24
DSR/F	1	1	1	1	1	1	1	1
DSS	24	22	20	20	22	15	-	-

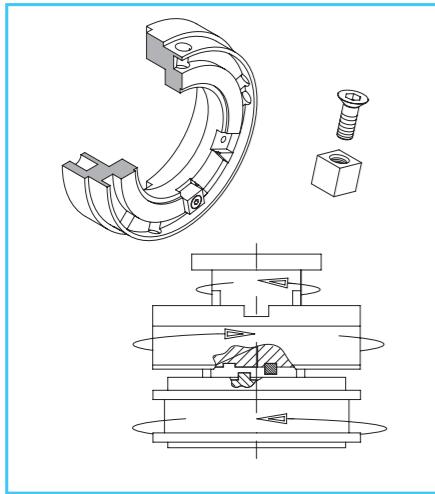

DSR - rollers torque limiter: versions

.../TAS: Torque limiter with stop pins

- Complete disconnection prevented.
- Minimum movement of the mobile base for an electrical signal to stop transmission.
- Roller or ball transmission.
- Torque range from 2.5 to 2,800 Nm; max. bore Ø68 mm.
- Suitable for applications where the drive must not be disconnected.

The stop pins inserted in the central support as shown in the figure serve to limit the axial stroke of the device, preventing its complete disengagement and thus maintaining a stable transmission connection.

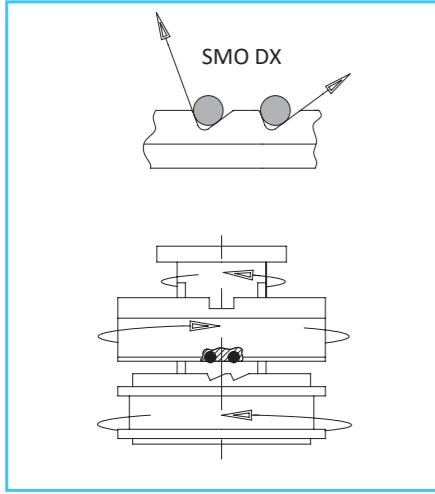

.../AM: Torque limiter with mechanical disconnection to maintain the timing between driver and driven

- Stop pin (patented) resists 4 times the maximum torque.
- 345° rotation allows the cancellation of the residual torque before the device stops.
- Maintains the timing and re-engages in the same position.
- High torque settings at reduced dimensions.
- Torque range from 10 to 2,800 Nm; max. bore Ø68 mm.

To allow our engineers to select the correct direction "SX" or "DX" for your application, we require a drawing showing:

- how the unit will be mounted on to the shaft (orientation).
- the direction of rotation
- confirm which drive will continue to rotate after the overload,
- the shaft or plate wheel, pulley, etc.

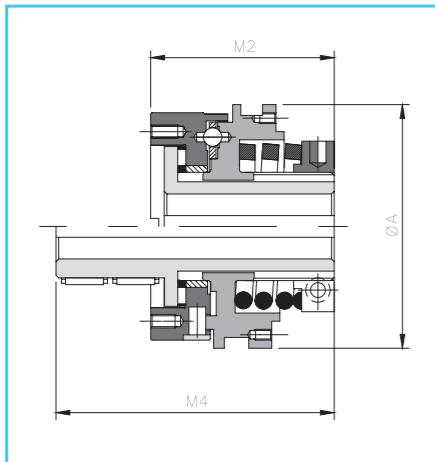

.../SMO: Torque limiter with different disengagement torques from clockwise to anti-clockwise rotation.

- Different intervention torques in the two rotation directions (patented).
- Locking of one direction possible.
- Roller transmission with automatic re-engagement.
- Available with equidistant re-engagement or personalized angular phases.
- Torque range from 10 to 12,000 Nm; max. bore Ø120 mm.

To allow our engineers to select the correct direction "SX" or "DX" for your application, we require a drawing showing:

- how the unit will be mounted on to the shaft (orientation).
- the direction of rotation.
- in which direction the high/low torque is required.

.../CM: minimum torque version

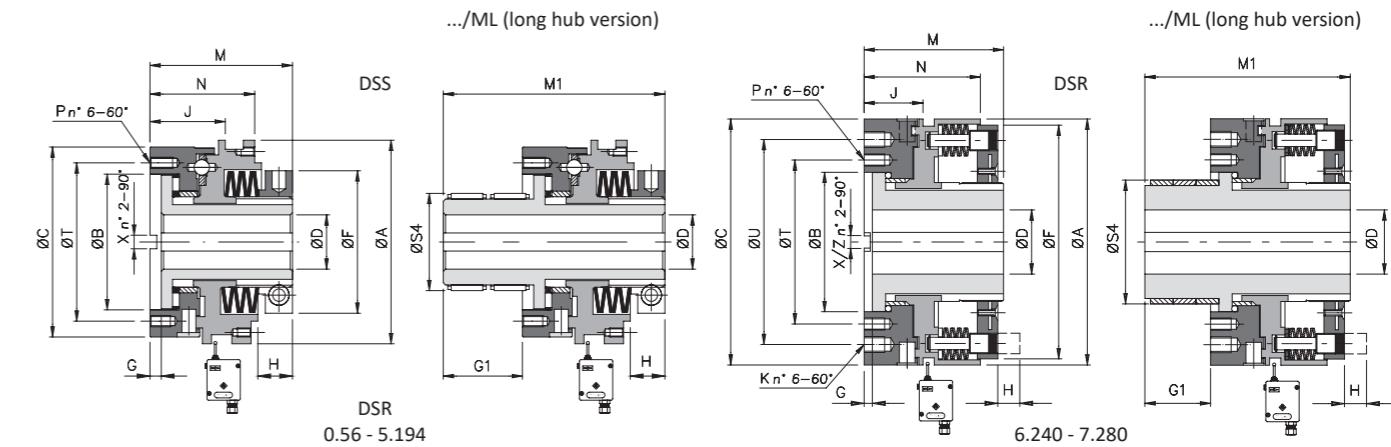

Helical springs execution, for a wider torque range and consequently a finer adjustment on calibration is possible

DSR - rollers torque limiter: technical data

- Basic model, connection with in-line shafts possible.
- The assembly with helical springs allows a higher sensitivity in torque setting: .../CM.
- Available with longer shaft for the assembly with transmission elements of large size : .../ML.
- Available with anti-corrosive surface treatments.
- Available with intervention signal ring.
- Torque range from 2.5 to 12,000 Nm; max. bore Ø120 mm.

DSR - rollers torque limiter: versions on request

.../FAV

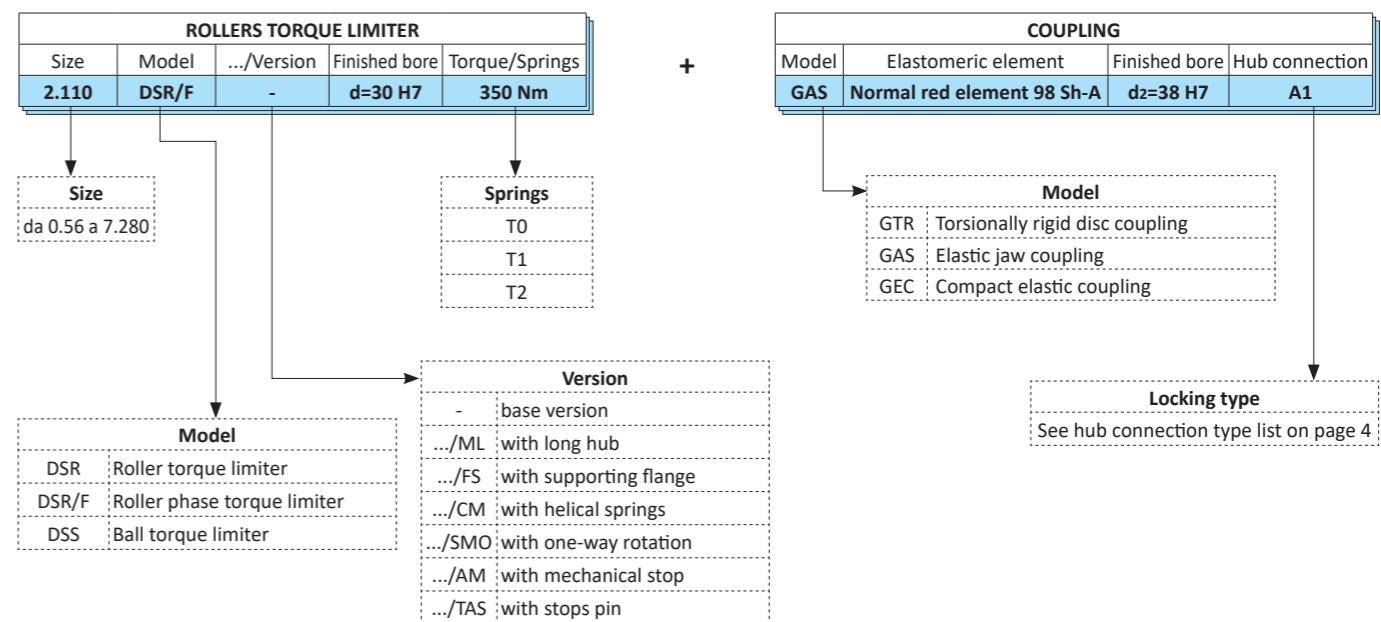

Flange designed and arranged for the connection of the cardan shafts, supported by the cage and rollers.

NOTES

- Data is relevant only to application (GEC), for torque limiter data see on page 23.
- Weights are relevant to the pilot bore torque limiter (GEC).
- Microswitches EM1 and inductive sensor PRX see page 69

DSR - rollers torque limiter: additional information

ORDER EXAMPLE

BACKLASH FREE TORQUE LIMITER

up to 1,200 Nm and 65 mm bore diameters

DSS/SG

DSS/SG - backlash free torque limiter: introduction

- Exact torque regulation through a balanced radial nut.
- Innovative calibration system by "H dimension" for an immediate calibration of the device.
- Re-engagement in equidistant phase (DSS/SG) or 360° (DSS/F/SG).
- Maintenance free.
- Possibility to add a microswitch / proximity to stop the motor drive.
- Model available only with finished bore.
- Drive component assembled and directly supported by a ball bearing.
- ON REQUEST
- Complete with transmission component worked and assembled (plate wheel, pulley, gear,...)
- Possibility of connection with 8 holes interchangeable with other products on the market.
- Possibility to have a connection flange to the most common intermittent drive units.
- Feasibility in personalized phase at 30°, 45°, 60°, 90°, ...

A ball safety coupling with high technology and precision. Provides backlash free transmission of motion with high sensitivity of reaction and an immediate release without peak load prior to release. The device can be adjusted by changing the pressure of the springs in the negative.

MAIN APPLICATIONS

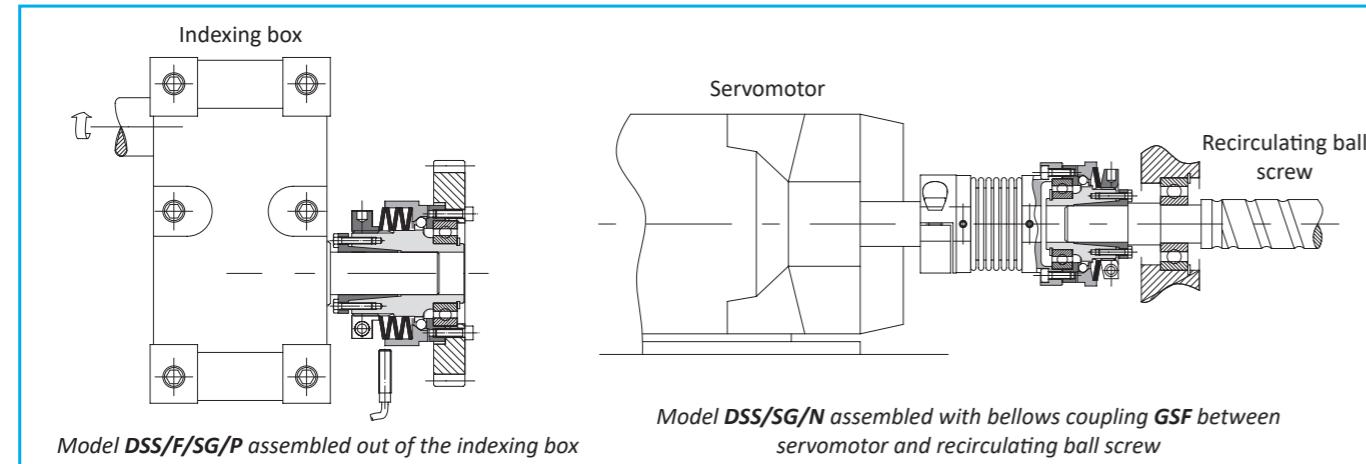

- Print machines and packaging machines.
- CNC tool machines.
- Index tables, filling machines, guiders.
- Servomotors, slide guides.

ADVANTAGES AND BENEFITS

- To protect the product against faulty positioning on the rotating table.
- To protect the indexing against overloading along the transmission.
- To protect the operating units of machine tools against impacts.
- To protect slides or servomotors against impact or limit stops.

	.../N: immediate disengagement when exceeding the calibration torque; low residual torque after the disengagement.	from 0,8 to 1,200 Nm 50 mm max. bore	Pag. 32
	... + GAS/CCE: connection by elastic coupling to accept high misalignments.	from 0,8 to 900 Nm 62 mm max. bore	Pag. 34
	... + GAS/SG: connection by elastic coupling and single split clamp hub for a quick installation.	from 0,8 to 900 Nm 60 mm max. bore	Pag. 35
	... + GSF: connection by bellows coupling for application with reduced inertia.	from 0,8 to 150 Nm 45 mm max. bore	Pag. 36

ASSEMBLY EXAMPLES

DSS/SG - backlash free torque limiter: versions

TORQUE ADJUSTMENT

It generates an immediate torque reduction, as soon as there is a minor overload, with consequent disengagement of the limiter and immediate stop of the drive. This characteristic is very useful on sensitive applications where even a slight increase of the loads can cause damage to the machine or to the machine product.

Adjustment of the Negative version is opposite to all other units in our range. Unlike the traditional units, by rotating the adjuster nut clockwise the disengagement torque will reduce, and therefore to increase the torque the nut must be rotated anti-clockwise. To assist the operator in setting, there are clear markings on the nut showing 75% of the max torque and +/- Min/Max directions indicated.

Unless otherwise requested, these models are supplied pre-calibrated at 75% of the maximum torque value of the spring's chosen configuration.

OTHER MODELS

DSS/SG/N-SS: STAINLESS STEEL MODEL (consult the dedicated brochure)

- Model without any backlash.
- Same dimensions as the standard model, both in negative and positive versions.
- Made in stainless steel at high resistance by suitable heat treatments.
- High resistance to corrosion.
- Suitable to food and/or pharmaceutical environments.
- Torque range: 1,5 to 900 Nm; max. bore ø65 mm

MAINTENANCE

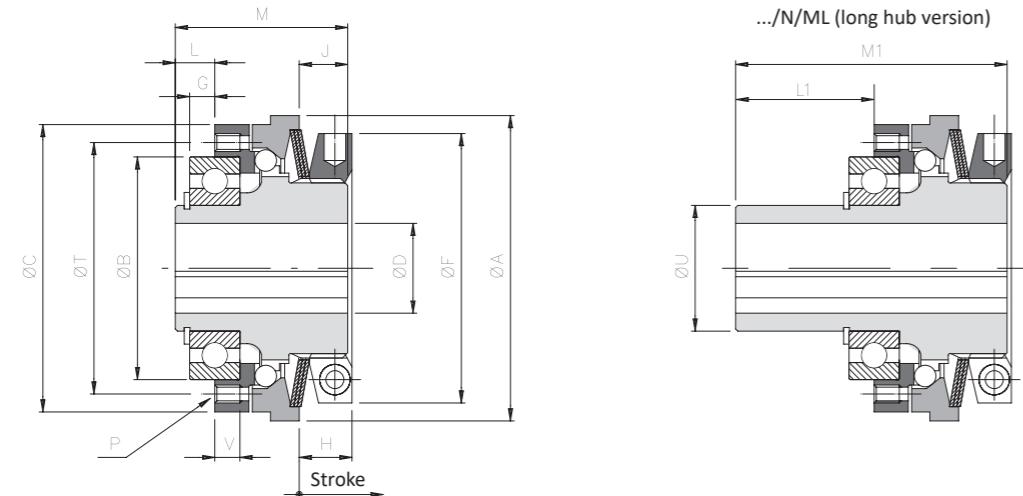

These devices, mechanical, are maintenance-free. In the case of the torque is appropriate to take account of different variables that combined together can affect the length of the limiter:

- Torque intervention in relation to the range provided by the limiter.
- Whether the frequency and duration of interventions.
- Ability to dissipate heat generated by the sliding.
- Speed of rotation.
- Environmental working conditions.

.../N - NEGATIVE version with bore and keyway: technical data

- Angular backlash free with compact dimensions.
- Instantaneous torque transmission reduction when overloading.
- Free of residual torque after disengagement.
- Fastest response times and highest sensitivity.
- Available with extended hub to assemble wide drive components: .../ML.
- Torque range: 0.8 - 1,200 Nm; max. bore Ø65 mm.

DSS/SG/RF - torque limiter free rotation: introduction

- Absence of torsional play during the transmission of motion.
 - Fine-tuning the torque through a balanced radial ring.
 - Motion transmission through balls.
 - An innovative calibration system with "H dimension" for an immediate calibration of the equipment.
 - Manual re-engagement.
 - No residual torque after disengagement.
 - Possibility of combining a switch / proximity to stop the engine.
- ON REQUEST
- Complete transmission gear worked and fitted (crown, pulley, gear, ...).
 - Can be supplied with various types of rigid/elastic couplings for in-line shafts transmission.
 - Possibility of surface treatments for corrosion-specific needs.
 - Possibility of connection with 8 holes interchangeable with other products on the market.

A backlash free Safety coupling with free rotation and no residual torque suitable for high speed transmission. The disengagement is instantaneous once the torque is reached, the calibration is adjusted by changing the pressure of the springs. The re-engagement is manual, quick and reliable.

APPLICATIONS

- Extruders.
- Packing machines.
- Automation technology.
- Test benches.

ADVANTAGES AND BENEFITS

- Protect the elements of a transmission even in case of high inertias.
- Protect the product from shock or incorrect positioning.
- Protect devices during transmission at high speeds of rotation.
- Greater durability of all devices, thanks to the free rotation.

	.../DSS/SG/RF: version suitable for immediate release to overcome Torque calibration; low residual torque after disengagement.	from 5 to 1,300 Nm 65 mm max bore	Pag. 42
	... + GAS/SG: connection with flexible coupling and locking clamp for quick installation.	from 5 to 1,300 Nm 70 mm max bore	Pag. 43

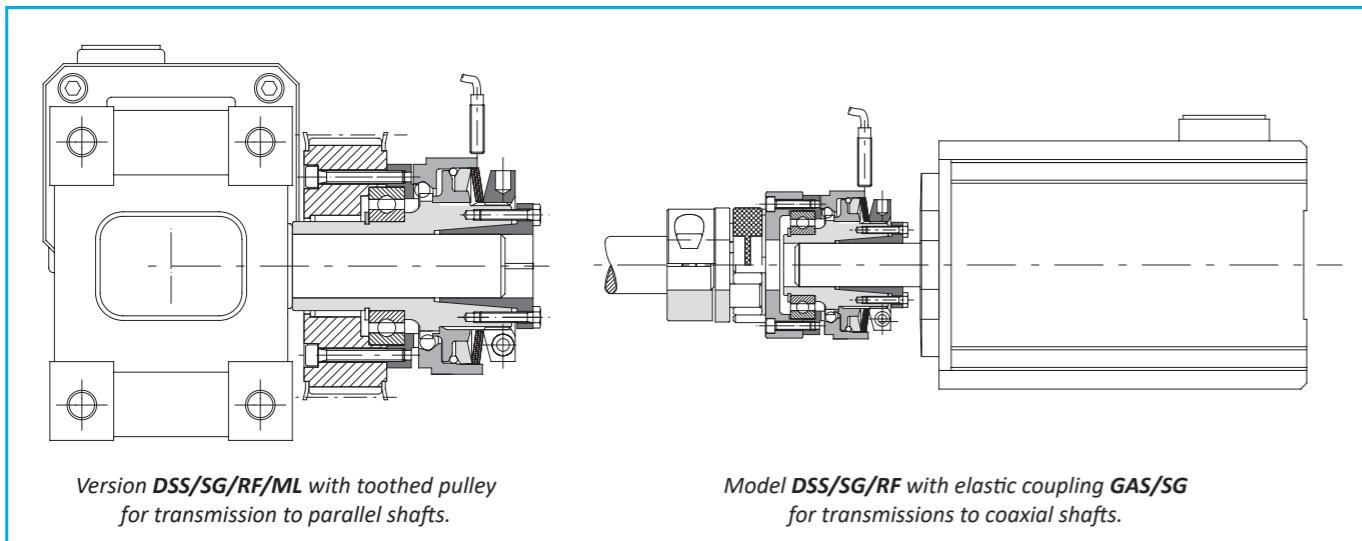

ATEX CONFORMITY

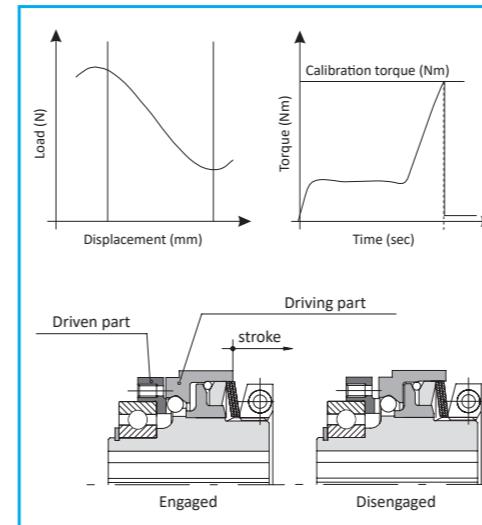

The DSS/SG/RF device can be supplied in compliance with Directive 2014/34/EU (ATEX) relating to equipment and protection systems intended for use in potentially explosive atmospheres. Marking is carried out on the hub as required by the directive assembly, program checks as described in the use and maintenance manual supplied with the device.

II 2G Ex II B T5 Gb -15 °C ≤ Ta ≤ + 80 °C

ASSEMBLY EXAMPLES

DSS/SG/RF - torque limiter free rotation: introduction

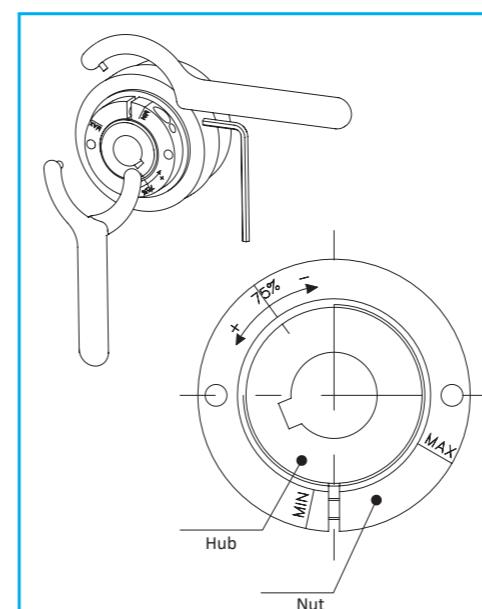

OPERATION

This model of torque limiter negative version to incorporate the following features:

- Backlash free with compact dimensions
- Instantaneous reduction of the couple at the time of overloading
- Absence of residual torque, after disengagement
- Immediate response times and high sensitivity

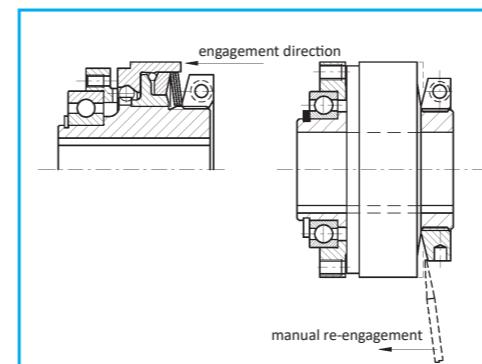

Suitable for protecting against overloads within automatic machines with significant powers and inertias and high rotation speeds. When an overload occurs an immediate and complete separation of the drive and driven occurs and will remain disconnected in free rotation until it is re-engaged manually or using a suitable tool. A possible micro switch or sensor detects the movement of the movable base by generating an electrical signal necessary to stop the transmission. This electrical signal can also be used for further control functions. Electromechanical microswitches model EM1 or inductive sensors model PRX, available from Comintec.

TORQUE ADJUSTMENT

Adjustment of the Negative version is opposite to all other units in our range. Unlike the traditional units, by rotating the adjuster nut clockwise the disengagement torque will reduce, and therefore to increase the torque the nut must be rotated anti-clockwise. To assist the operator in setting, there are clear markings on the nut showing 75% of the max torque and +/- Min/Max directions indicated.

Unless otherwise requested, these models are supplied pre-calibrated at 75% of the maximum torque value of the spring's chosen configuration.

HOW TO USE, ASSEMBLE AND RE-ENGAGEMENT

The device is supplied ONLY with finished bore in the hub, unless otherwise specified, with tolerance H7 with integrated locking assembly or keyway according to UNI 6604 (DIN 6885-1) with tolerance H9.

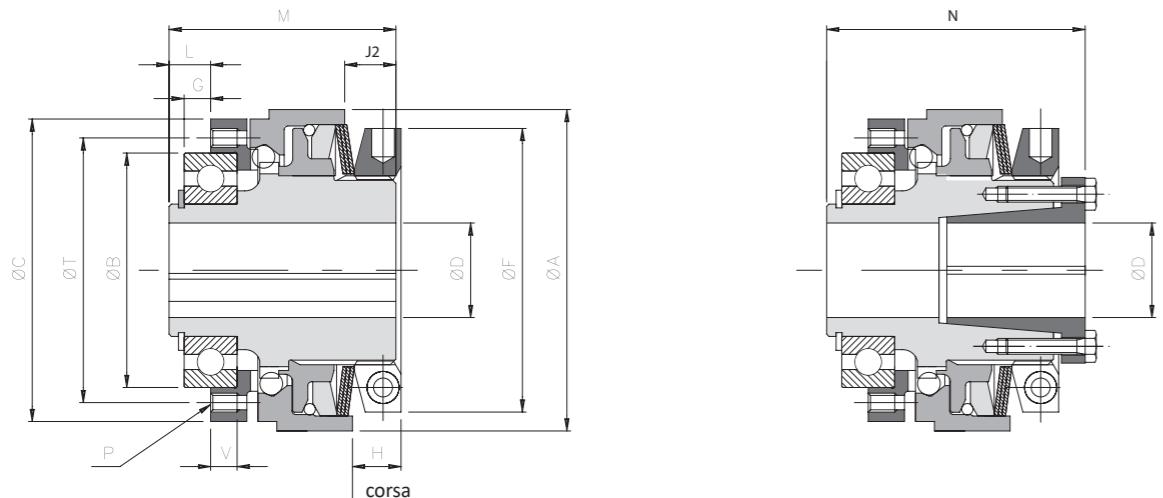

The device can be fixed axially by a screw and washer for the version with hole and keyway or by the locking device integrated in the version with this. The device is NOT self-supporting so it is necessary to provide that the shafts on which it will be fitted are with bearings and are supported in the case of the application are met with coupling misalignment shown in the catalog.

The re-engagement can take place only and exclusively when the machine is stopped. Occurs simply by moving the external mobile base in the opposite direction to the ring nut by exerting a slight axial pressure manually for low torques or by using a tool that can act as a lever for larger torques.

DSS/SG/RF - torque limiter free rotation: technical data

- Simple manual re-engagement without special equipment.
- Suitable to be installed in the kinematic chains with high inertia.
- Available according to ATEX conformity: II 2G Ex II B T5 Gb -15°C ≤ Ta ≤ +80°C.
- Organ mounted and directly supported by a ball bearing.
- Model available only with finished bore (with keyway or with locking assembly).
- Torque range: 5-1,300 Nm; Ø65 mm maximum bore.

DSM

DSM - modular torque limiter (free rotation): introduction

- Made in steel fully turned, with high mechanical strength.
- Free rotation after disengagement without residual torque.
- Reliable and maintenance free.
- Protected from external agents.
- Suitable for high rotation speeds and high inertias.
- Simple system of calibration and re-engagement.
- Compact and robust design.

ON REQUEST

- Overload signal ring (.../SI).
- Possibility of fitting with finished bore and keyway or locking assembly.
- Custom solutions for specific applications.
- Possibility of surface anticorrosive treatments for specific requirements.

A robust torque limiter with modular torque adjustment. Free rotation after overload permits high rotational speeds with also high torque settings and large shaft diameters can be accommodated.

The torque modules can be individually adjusted and re-engagement of the unit is quick and easy.

MAIN APPLICATION

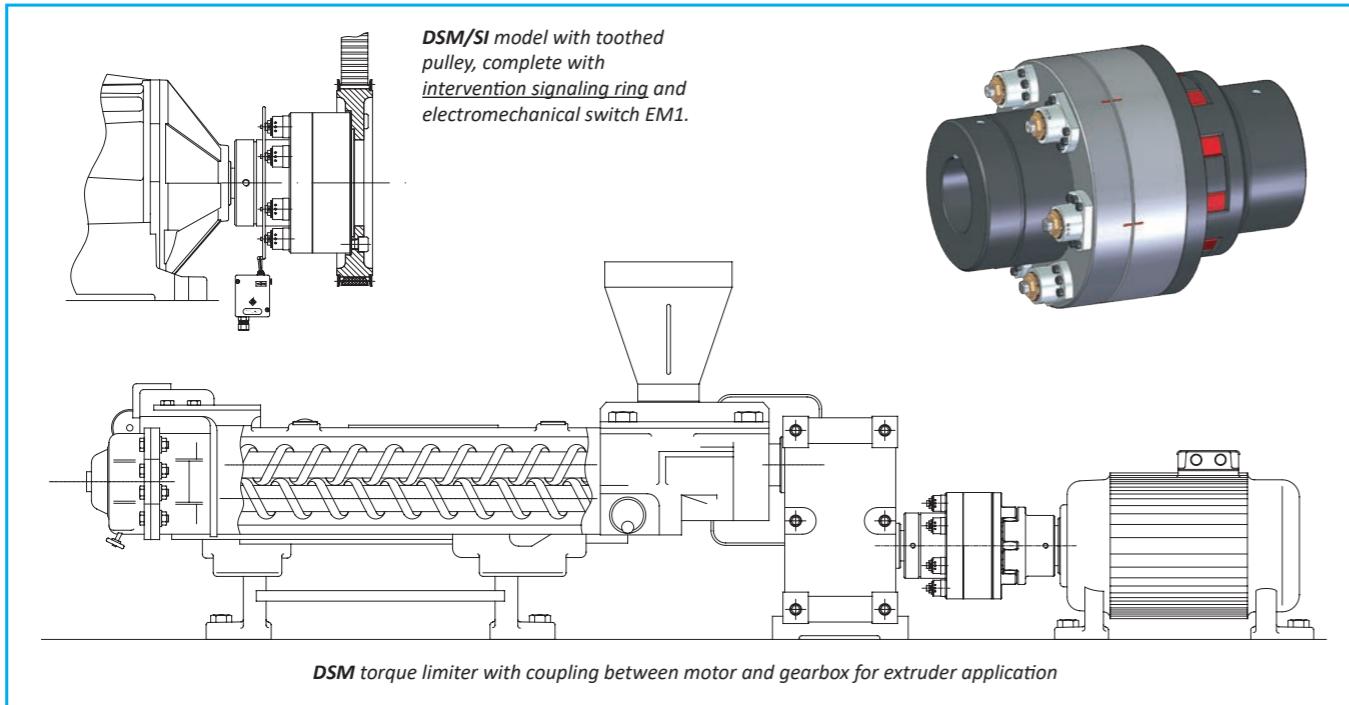

- Extruders and mills.
- Mining industry and transporters.
- Heavy industry.
- Earthmoving machines and shredding/crushing machines.

ADVANTAGES AND BENEFITS

- Product protection in case of overload.
- Protection of operating units of machines in case of a collision.
- Protection of the drive from external overloads.
- Protecting conveyor belt stoppages.

	DSM: basic model for transmission to parallel shafts with plate wheel, gear or pulleys.	From 200 to 9,500 Nm of torque 140 mm max. bore	Pag. 47
	... + GAS: coaxial connection with elastic coupling to absorb start-up torque and vibration.	From 200 to 7,000 Nm of torque 140 mm max. bore	Pag. 48
	... + GTR: coaxial connection with torsionally rigid disc coupling for backlash free transmission.	From 200 to 9,500 Nm of torque 140 mm max. bore	Pag. 48

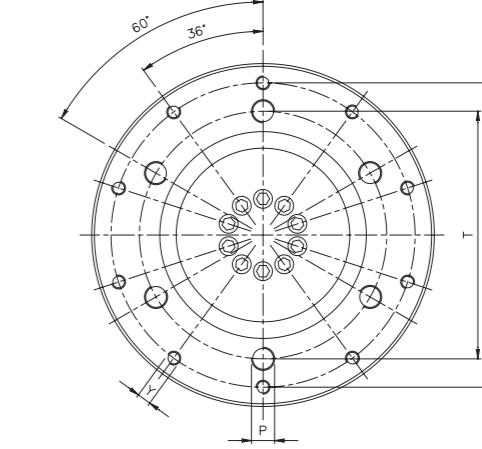

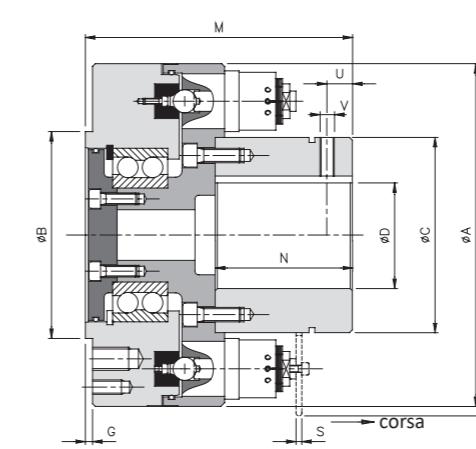

ESEMPI DI APPLICAZIONE

DSM - modular torque limiter (free rotation): technical data

- Statically balanced with modules arranged symmetrically.
- Torsionally rigid.
- Module replacement without removing the device or other transmission components.
- Complete separation between the driven and driving part after disengagement.
- Integrated bearings for the support of the transmission.
- Torque range: max up to 120 KNm; maximum ø 260 mm

2	3	87	56	54	54	30	M8	95	5,5	3xM4

CALIBRATION

The key elements of the DSM module consist of the central piston (p) that will drive a hardened ball (s) into the location seat (t). Torque adjustment can be made also whilst the module is fitted to the torque limiter by the rotation of the hexagonal adjuster nut (r). Make sure that during the adjustment the fixing screw (u) is fully unscrewed to allow free rotation of the adjuster nut. The units are supplied as standard with the minimum possible torque setting but by rotating the adjuster nut clockwise the torque value will increase, and the setting can be monitored by viewing the adjustment notches located on the circumference of the adjuster nut. A complete revolution of the adjuster nut will equal one pitch. It is important once setting is completed to tighten the locking screw (u) in order to lock the adjuster nut in place. For more detailed setting instructions please see the fitting and setting instructions sheets available.

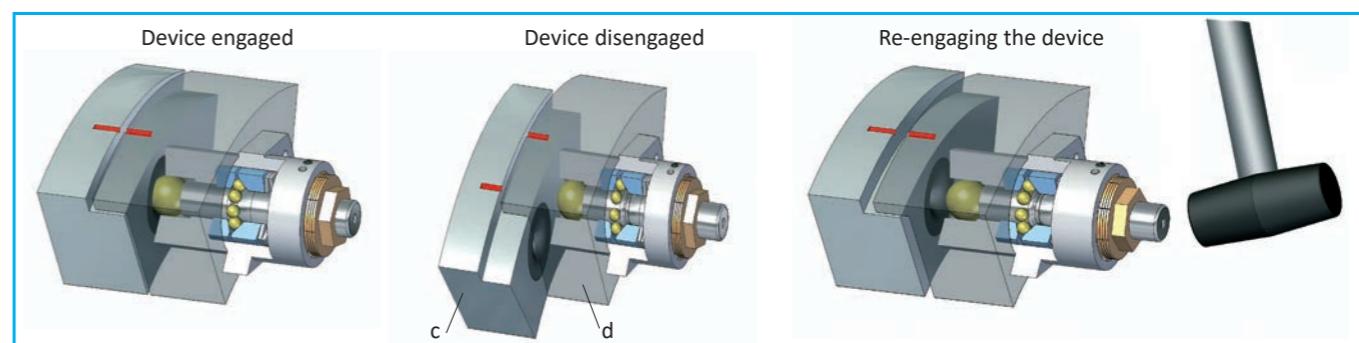

RE-ENGAGEMENT

The re-engagement of the limiter is manual and should only be performed with the device at rest.

Turn the fixed base (c) or the mobile base (d) so that the two reference marks are in line.

At this point, insert the pins of the related modules with slight but firm pressure using a tool or rubber mallet.

■ OPERATION

This model of freely rotating limiter DSM has been specifically designed to protect against overload in heavy industry machines with significant powers and inertia and high speed of rotation.

The seals present protect from dust, dirt and prevent leakage of grease used within.

In nominal operating conditions the transmission torque is transferred from the driving to driven components by a different number of modules assembled symmetrically on an outer circumference of the device with the possibility of different configurations of springs inside them.

In case of overload, when the torque demand from the driven portion exceeds that of calibration, the balls will be forced out of the seat area and by doing so axially move the central pistons within the modules. This release occurs instantaneously separating the driver and driven sections allowing free rotation of the section still rotating until the transmission is stopped.

The device can also be equipped with a overload detection ring (DSM/SI), connected to the central pivots of the various modules, to be able to "read", through an electromechanical switch (model ComInTec: EM1) or an inductive sensor (model ComInTec: PRX), the axial movement and send an electrical signal to trigger an alarm and stop the transmission.

The re-engagement of the individual modules must be done with the machine stopped as described in the previous section devoted to it.

■ HOW TO USE AND ASSEMBLE

The device comes complete with finished bore, unless otherwise noted, with tolerance H7 and keyway DIN6885-1 with H9 tolerance.

The fixing of the device can be made axially through the bore with a washer or on request an internal locking assembly.

The device is NOT self-supporting so it is necessary to provide ensure that the shaft on which the device will be mounted are supported with bearings and in the case of shaft to shaft connection the misalignment values detailed in the catalogue are noted.

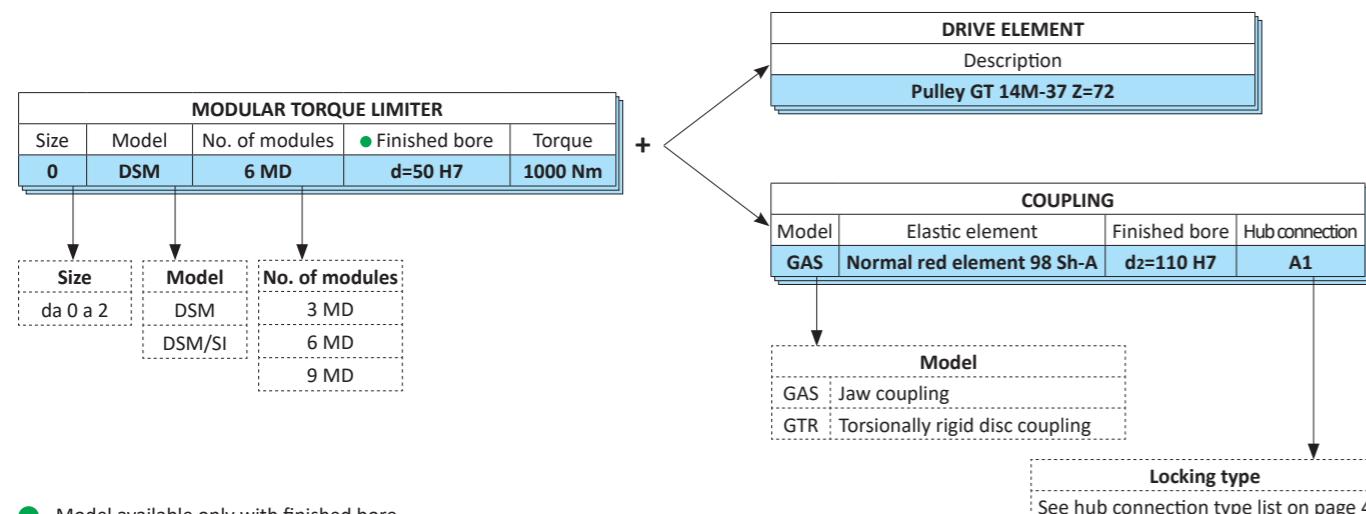

■ MAINTENANCE

These devices, are maintenance-free.

In the case of the torque calibration it is important to take into account several variables that combined together can affect the duration of the limiter:

- Torque value of intervention in relation to the actual range of the limiter.
- The frequency and duration of interventions.
- Ability to dissipate the heat generated by slippage or disengagement.
- Speed of rotation.
- Environmental conditions at work.

.../PR

- Safety coupling made in steel fully turned, spacer made in aluminium fully turned for IEC-B5 motors
- Standard treatment of phosphating on torque limiter.
- Compact solution.
- Model available for IEC motors and gearboxes.
- Protection in both directions.
- Instant disengagement upon overload.
- Fast and simple calibration using our "H" dimension procedure.
- ON REQUEST
 - Device calibrated and ready to use.
 - Friction rings available in various materials and performance to suit specific needs.
 - Free rotation backlash free balls model according to ATEX conformity.
 - Various anti-corrosive surface treatments available.

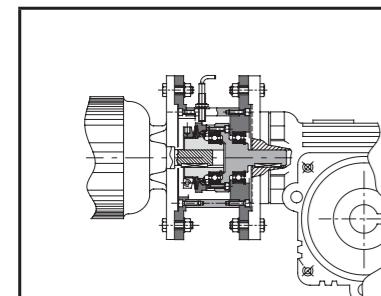

Safety coupling to be mounted between the motor and gearbox with flanged B5 spacer. Available in sliding (DF/TAC/PR-V) and disengage versions (DSS/F/SG/PR-V or DSS/SG/RF/PR-V). The location of the limiter between the motor and gearbox requires a smaller size of device with also reduces costs.

MAIN APPLICATION

- Conveyor.
- Packaging machines.
- Wrapping machines.
- Motorized systems of handling and positioning.

ADVANTAGES AND BENEFITS

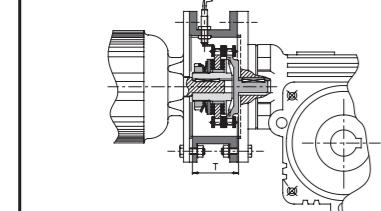

- Simplicity and sensitivity compared to gearbox integrated solutions.
- Protect the motor-gearbox from accidental collisions or impacts from the products being processed.
- Greatly reduces production downtime in case of overload.
- Absorb static torques without disengaging (friction model).

DSS/F/SG/PR-V: Backlash free balls model to fit between motor and gearbox.

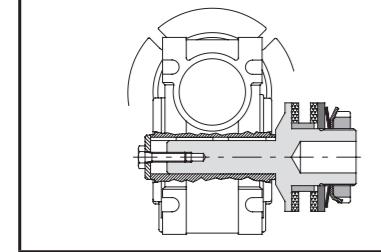

DSS/SG/RF/PR-V: Free rotation backlash free balls model according to ATEX 2014/4G/UE conformity.

FITTING EXAMPLE

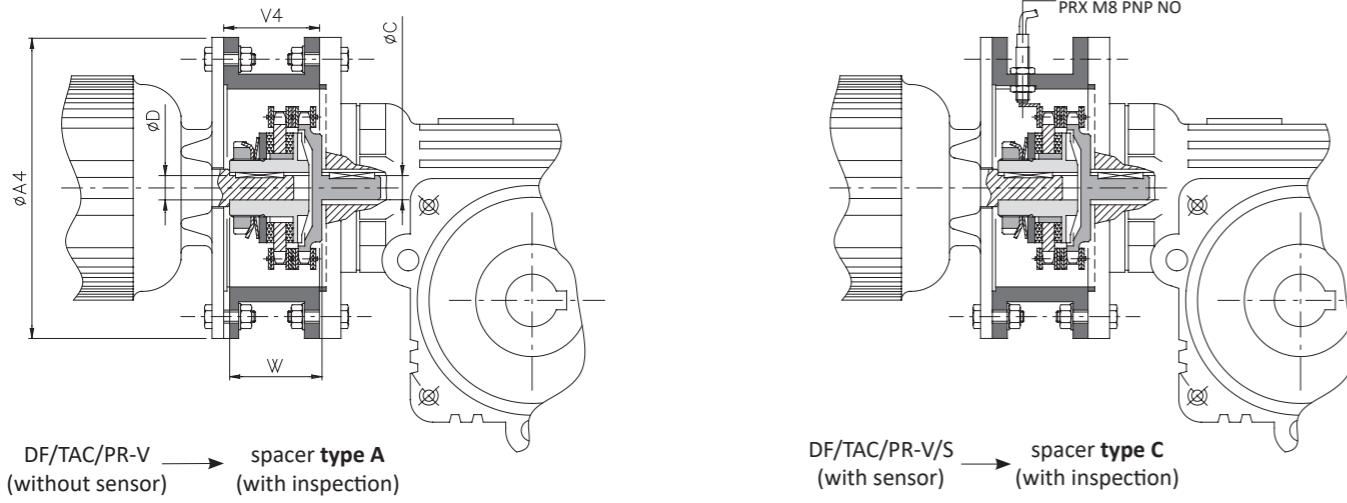

Wiring diagram of the sensor PRX for intervention signalling on model DSS/F/SG/PR -V

DF/TAC/PR-V - friction model with chain coupling for gearboxes (input shaft): technical data

- Compact and economic solution.
- Sliding of the driving part to overcome the torque calibration without disconnecting the transmission.
- Silent intervention and vibration-free.
- Complete solution with connecting flanges in aluminum for IEC B5 motors.
- Possibility of integration of an inductive sensor for monitoring the overload (DF/TAC/PR-V/S).
- Torque range: 1-1,650 Nm; bore/shaft max: Ø55 mm.

NOTES

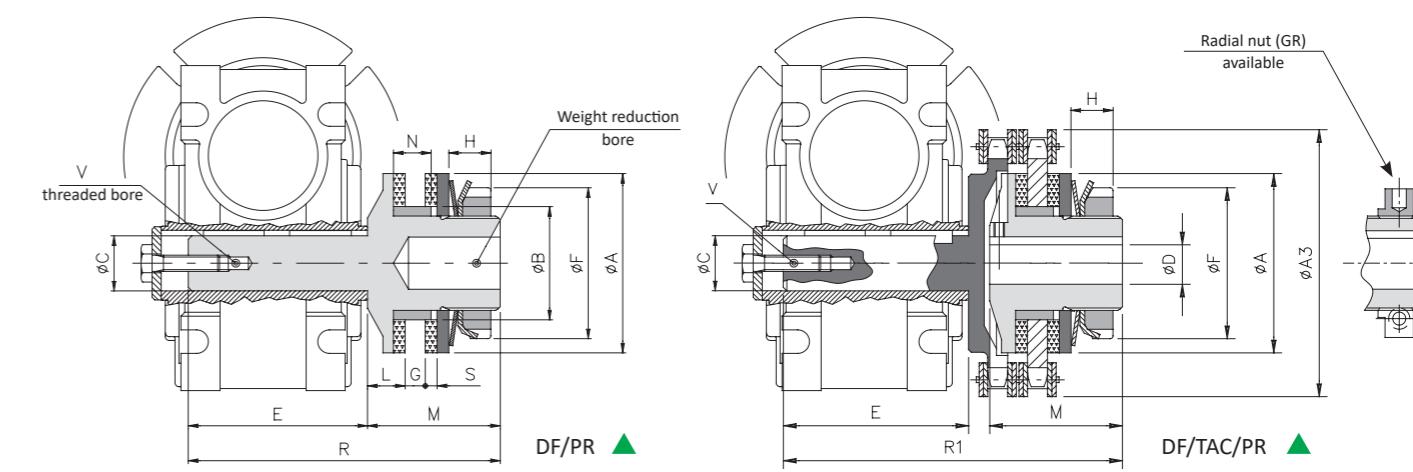

- D H7 *: reduced keyway on torque limiter.

DF/PR and DF/TAC/PR - friction model for gearboxes (output shaft): technical data

ON REQUEST MODEL

- Possibility of friction rings with different performance for specific needs.
- Specifically designed for installation on hollow output shaft gearboxes.
- Available complete with transmission component fully turned and fitted.
- Available with radial nut (.../GR) statically balanced.
- Model for gearboxes with a chain coupling, suitable for connections of coaxial shafts (DF/TAC/PR).
- Torque range: 1-2,600 Nm; max shaft: Ø55 mm; max bore: Ø65 mm.

● DF/TAC/PR-V model is supply combined with the corresponding spacer (type A)

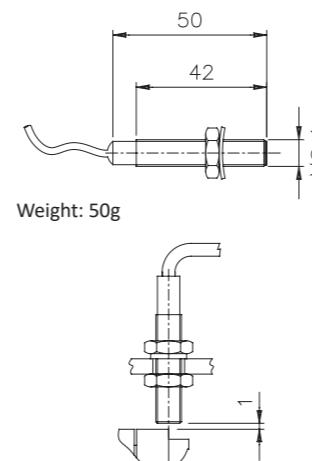

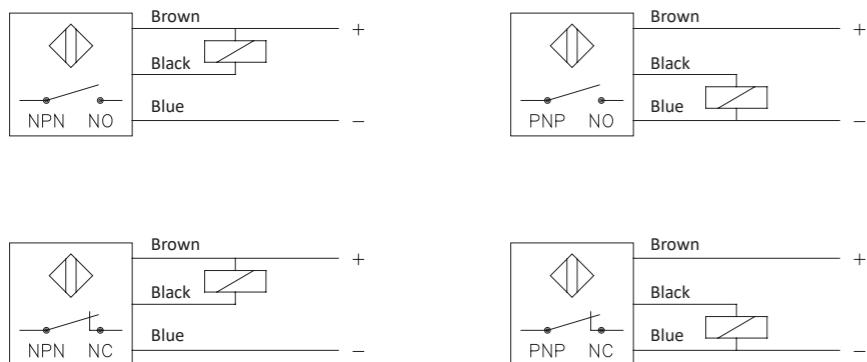

DF/TAC/PR-V/S model is supply combined with the corresponding spacer (type C), complete with inductive proximity sensor (PRX).

AXIAL FORCE LIMITER up to 4,700 N and 20 mm shaft diameters

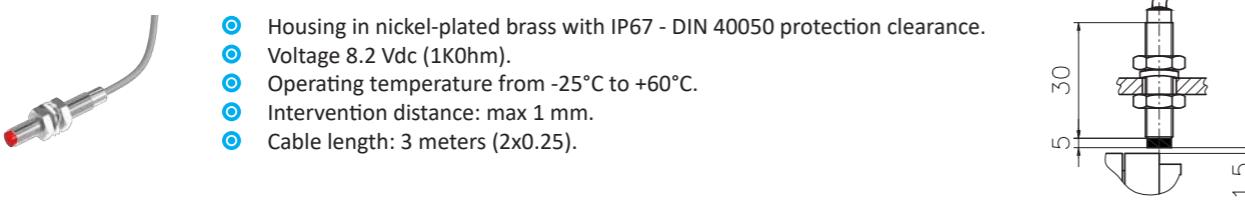

PRX - inductive proximity sensor: technical data

- Standard version: Stainless steel cover with protection level IP67 DIN 40050.
- Electric contact: 7 ÷ 30 Vdc. - Frequency: 4 KHz; Absorption ≤ 10 mA (Max 200mA).
- Operation temperature range from -25°C to + 70°C
- Output: NPN (N.O.-N.C.) – PNP (N.O.-N.C.).
- Operating distance: max 1,5 mm.
- Cable length: 2 m (3x0,2).

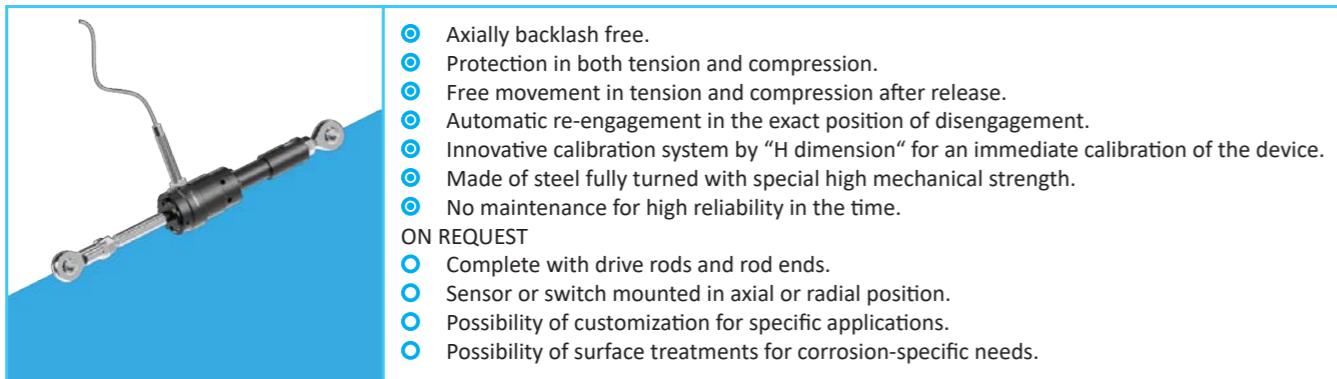

■ PRX-EX - ATEX proximity induced sensor

- Housing in nickel-plated brass with IP67 - DIN 40050 protection clearance.
- Voltage 8.2 Vdc (1K0hm).
- Operating temperature from -25°C to +60°C.
- Intervention distance: max 1 mm.
- Cable length: 3 meters (2x0.25).

DSA - axial force limiter: introduction

Safety coupling with linear limitation of force. Releasing both in compressive and tension once it reaches the calibration force. The setting force can be adjusted by turning the adjuster nut onto the springs and re-engagement is automatic. Possibility of connecting linear motion also very distant from each other.

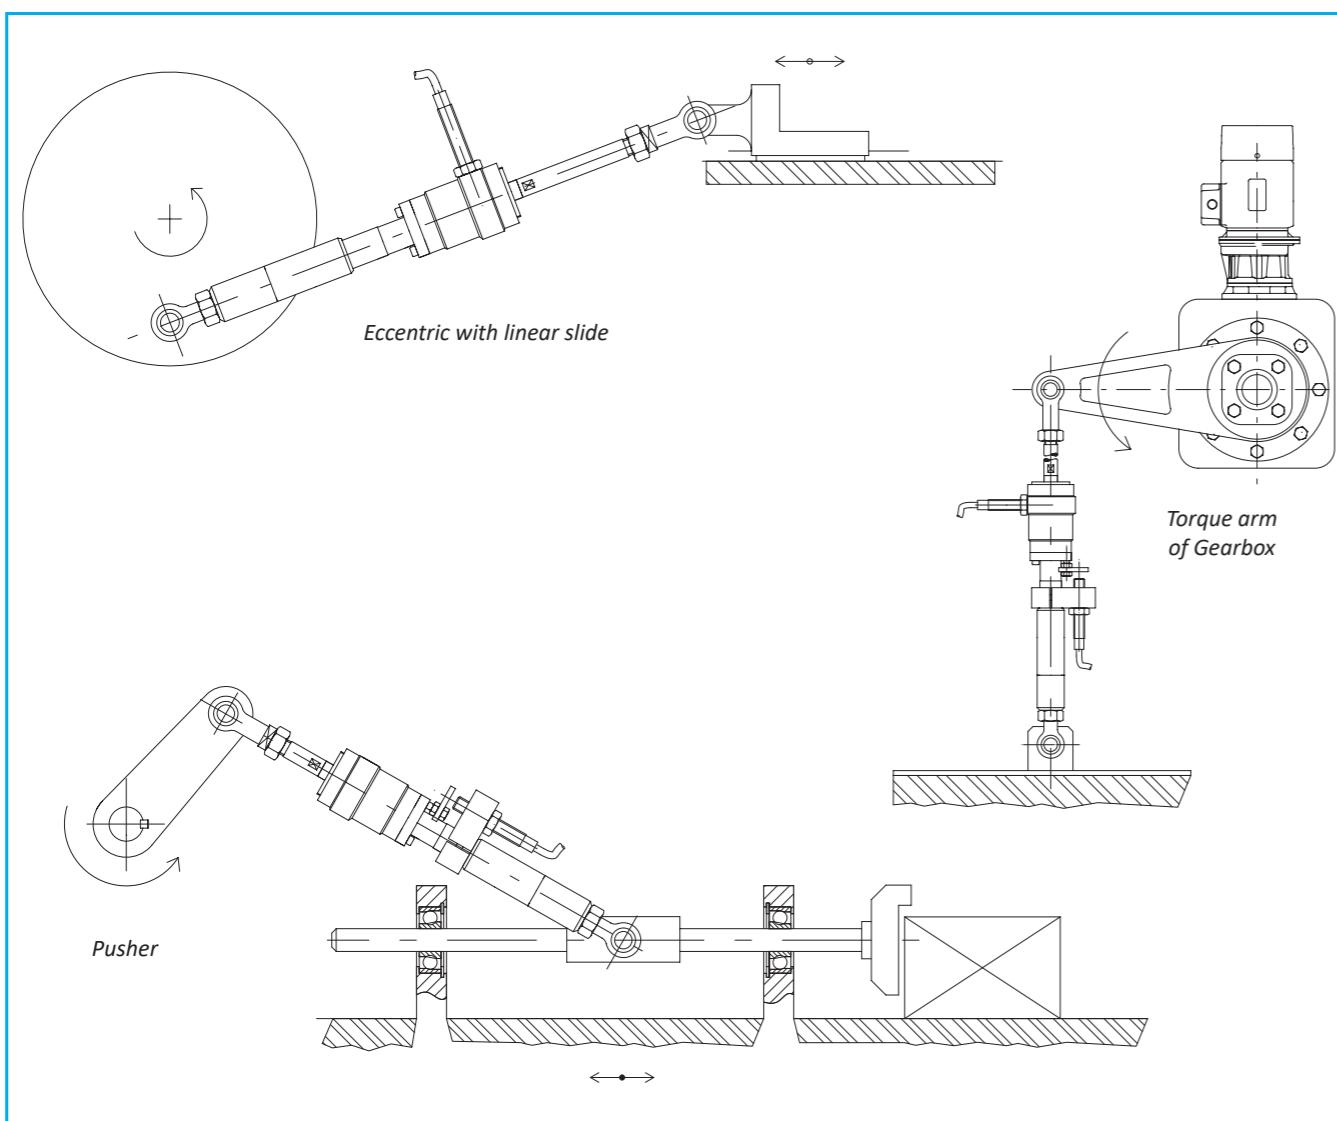

MAIN APPLICATIONS

- Shaft mounted gearboxes.
- Cam/Eccentric movements.
- Transactions structured for pushers and slides.
- Crank mechanism.

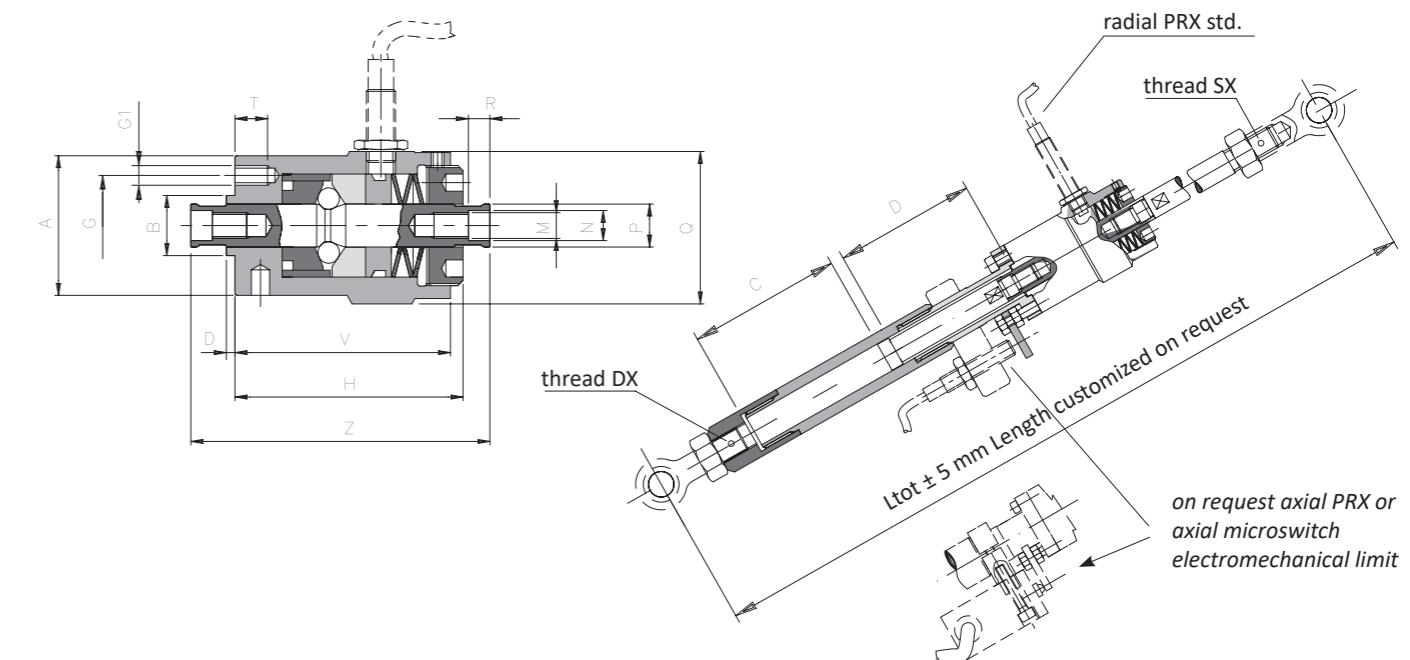

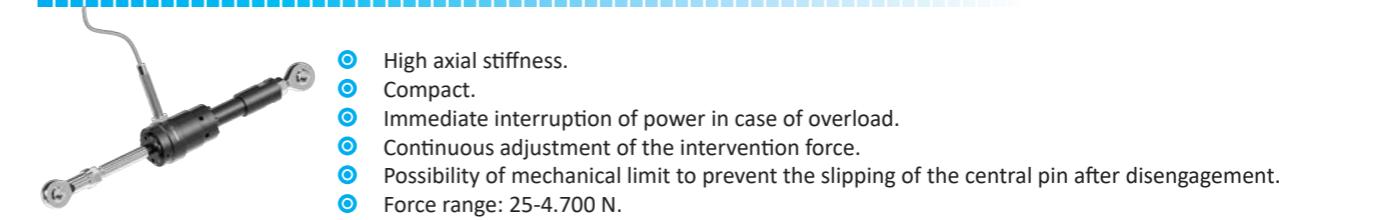

ADVANTAGES AND BENEFITS

- Protect shaft mounted gearboxes overloads on the transmission.
- Protect slides or other moving parts from accidental shock or collision limit.
- Protect movements typically jams or improperly placements.
- Protect the final product from crushing or deformation.

ASSEMBLY EXAMPLES

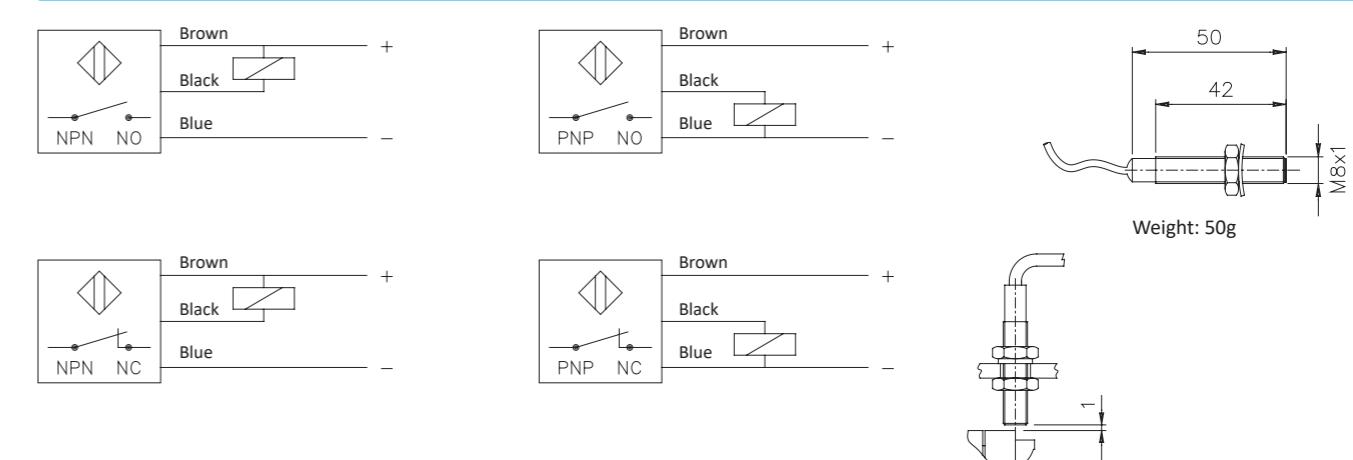

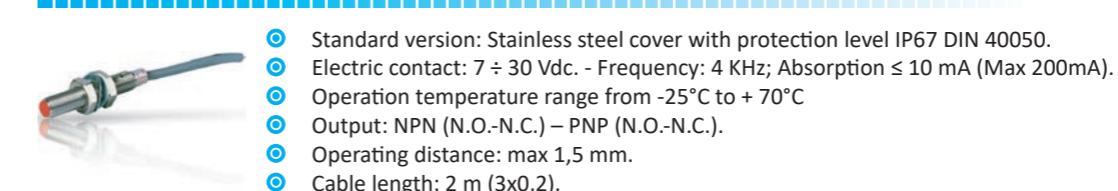

DSA - axial force limiter: introduction

AP

AP - pneumatic clutches: introduction

- Simple and precise calibration.
- Transmission engagement / disengagement and torque limiter functions (safety coupling).
- Reliability and repetitiveness of the calibration torque.
- Torque variation whilst in motion, by pressure regulation.
- Free rotation after the disengagement through a complete disconnection between the parts.
- Low residual torque on disconnected parts.
- Models available only with finished bore.

ON REQUEST

- Complete with transmission element machined and assembled (plate wheel, pulley, gear, ...).
- Can be supplied with various types of rigid/elastic couplings for in-line shafts transmission.
- Possibility of shaft connection with finished bore, locking assembly or other systems.
- Available in anti-corrosive version, with specific surface treatments.

A friction clutch or roller with torque adjustment even during operation. Ability to disengage the drive and driven by pneumatic or electrical impulse. Low residual torque after disengagement. Calibration adjustable by changing the pressure (pneumatic) air supply.

APPLICATION FIELD

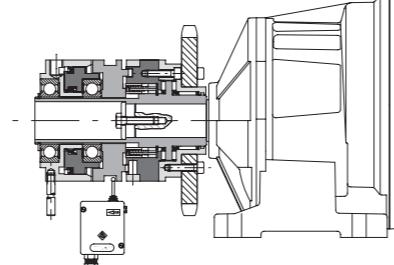

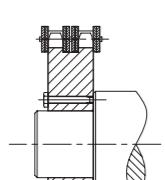

- Machines with variable torque requirements.
- Test benches.
- Coiler and uncoilers.
- Cut format systems.

ADVANTAGES AND BENEFITS

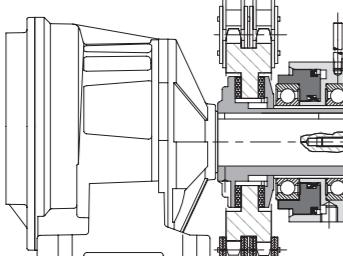

- Engage/disengage different product transmission lines.
- Maintain tension of wire/film coils.
- Regulate different torques depending on the change of the format.
- Protect the motor gearbox against every form of overload.

	DSR/F/AP: Complete engagement-disengagement of the transmission, also for long periods	from 7 to 30,000 Nm 120 mm max bore	Pag. 63
	DSR/F/AP + GEC: compact coaxial connection for simple maintenance without being forced to remove the coupling	from 7 to 30,000 Nm 180 mm max bore	Pag. 64
	DSF/TF/AP: friction motion transmission as tensioner.	from 3 to 875 Nm 65 mm max bore	Pag. 65
	DSF/TF/AP/TAC: simple and economic coaxial shaft connection.	from 3 to 875 Nm 80 mm max bore	Pag. 66

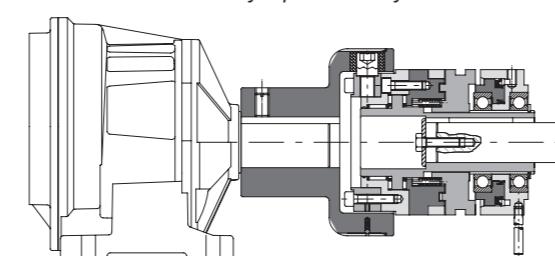

ASSEMBLY EXAMPLES

Model DSR/F/AP with plate wheel for parallel shaft transmission.

Model DSF/TF/AP with plate wheel for parallel shaft transmission.

Model DSR/F/AP Compact elastic coupling GEC for coaxial shaft transmission.

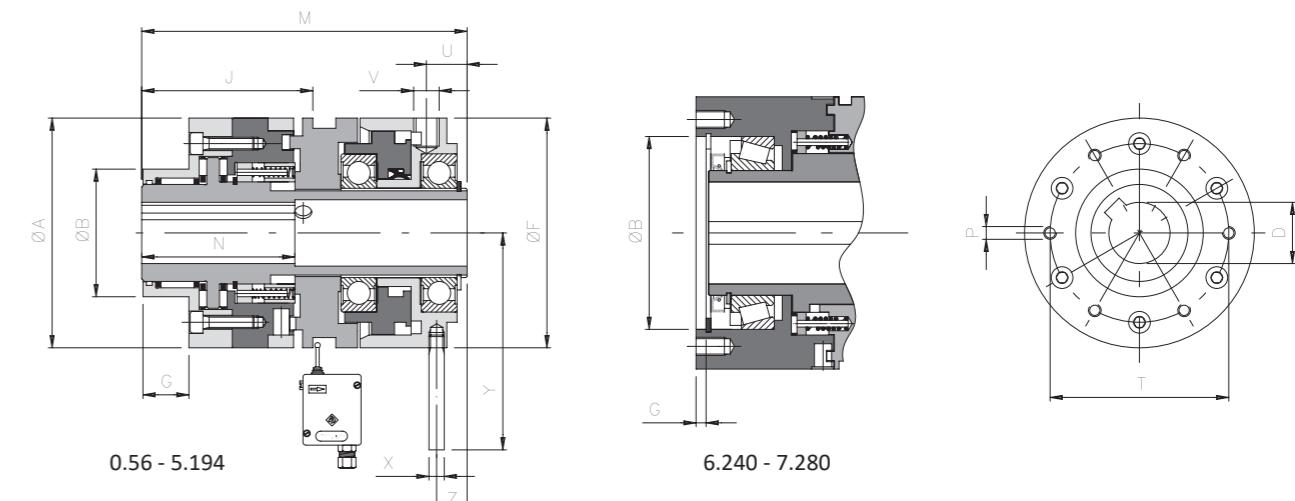

NOTES

- Avoid rigid locking of the anti-rotating pin of the cylinder as it can cause imbalances during rotation.
- The engagement of these devices must take place at low speed or with the machine stopped.

DSR/F/AP - roller phase pneumatic clutch: technical data

- Transmission through rollers with re-engagement in phase 360° (equidistant on request, 30°, 45°, ...).
- Free rotation for long periods after overload.
- Suitable for high rotation speeds.
- Maintenance free for high reliability.
- Arranged to add a microswitch / proximity to stop the motor drive.
- Torque range: 5 – 30 KNm; max. bore ø120 mm.

▲ On request

OTHER COUPLING MODELS

Model DSF/TF/AP with elastic jaw coupling **GAS** to accomodate high misalignments.

Model DSF/TF/AP with compact elastic coupling **GEC** for simple maintenance without removing the coupling.

NOTES

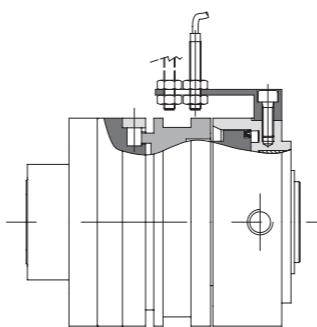

- Data is relevant to the whole assembly (DSF/TF/AP/TAC).
- Weights are relevant only to the pilot bore (DSF/TF/AP/TAC).
- DH7***: finished bore max diameter with reduced keyway UNI7510.

AP - pneumatic clutch: versions on request

VERSION ON REQUEST

.../PRX

Version with proximity inductive sensor PRX M8x1, integrated into the DSR/F/AP. Compact and versatile solution, without adding equipment and/or external components.

EXAMPLE CIRCUIT CONNECTION TYRE

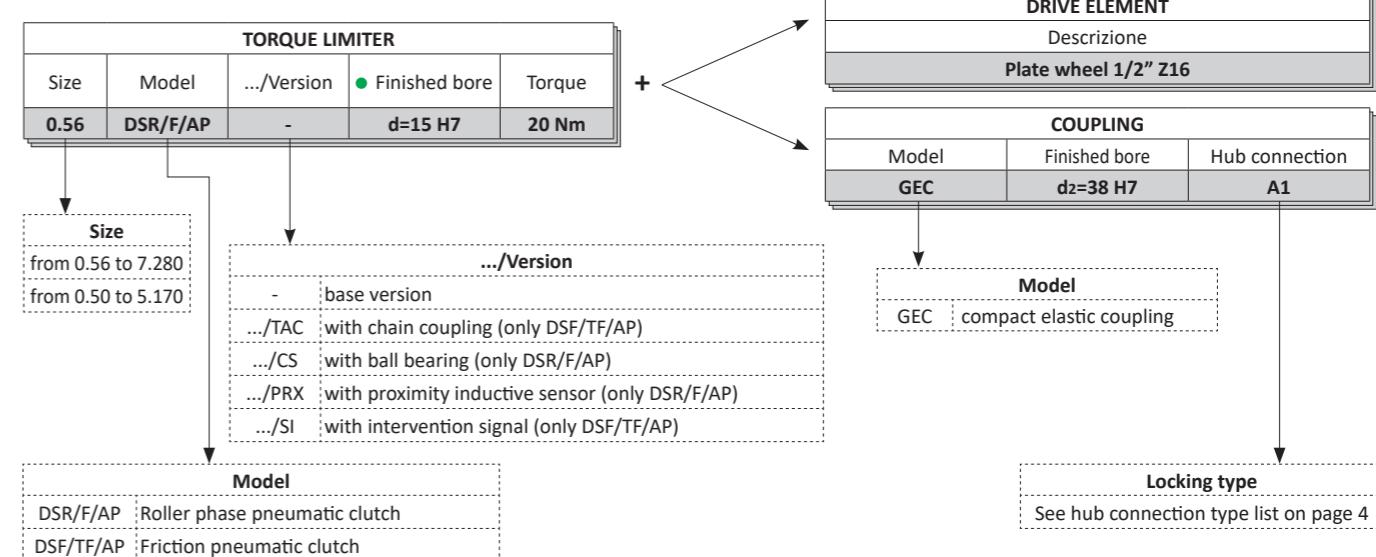

The pneumatic clutch are designed for the connection of pneumatic circuit with connection type "GAS". Some examples for the control to the pressure are shown here:

A) Adjustable pressure with pressure regulator.

B) Control of two pressures using solenoid valves.

C) Control of variable pressure by PLC.

ORDER EXAMPLE

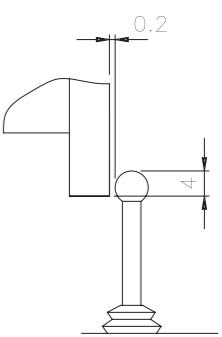

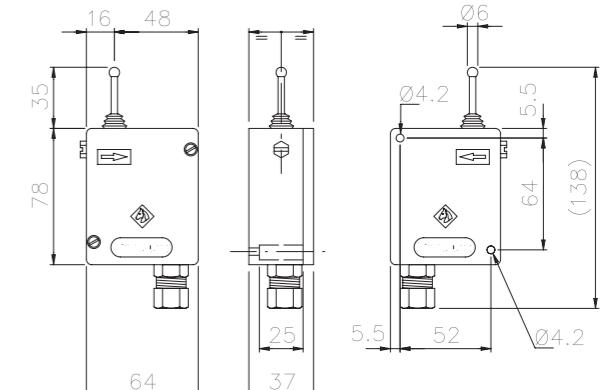

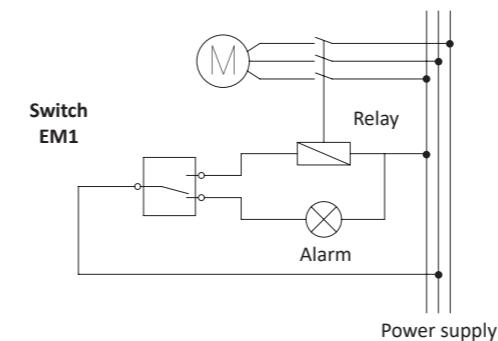

- Both models available only with finished bores.

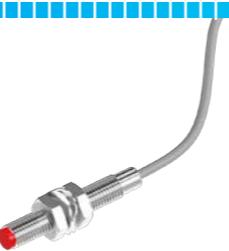

EM1 - electromechanical switch: technical data

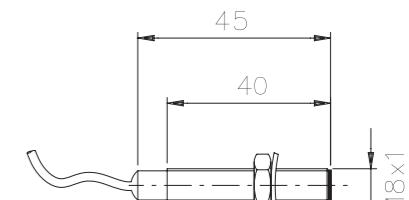

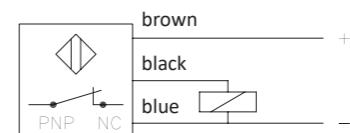

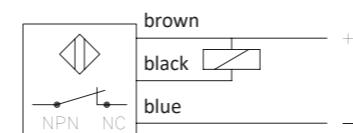

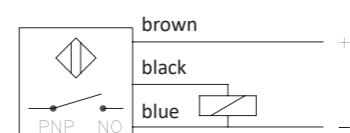

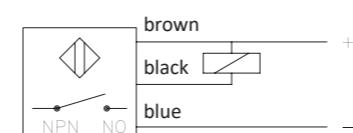

- Die-cast aluminium box.
- Protection level IP57 DIN 40050.
- 1 contact switch
- Adjustment of the lever end position possible.
- Operation temperature range from -10°C to +85°C.
- Three different options of voltage input: 1,5A - 250 Vac; 5A-24 Vdc; 0,2A-250 Vdc.
- Initial stroke 0,7 mm, Extra stroke: 4 ÷ 8 mm depending on setting (possible in a range of 6 mm).

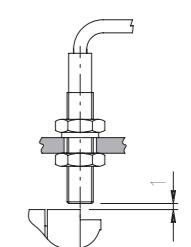

PRX - inductive proximity sensor: technical data

- Standard version: Stainless steel cover with protection level IP67 DIN 40050.
- Electric contact: 7 ÷ 30 Vdc. - Frequency: 4 KHz; Absorption ≤ 10 mA (Max 200mA).
- Output: NPN (N.O.-N.C.) – PNP (N.O.-N.C.).
- Operating distance: max 1,5 mm.
- Cable length: 2 m (3x0,2).
- Operation temperature range from -25°C to + 70°C
- Available ATEX model (**PR-EX**): see characteristic to pag. 56

Weight: 50g

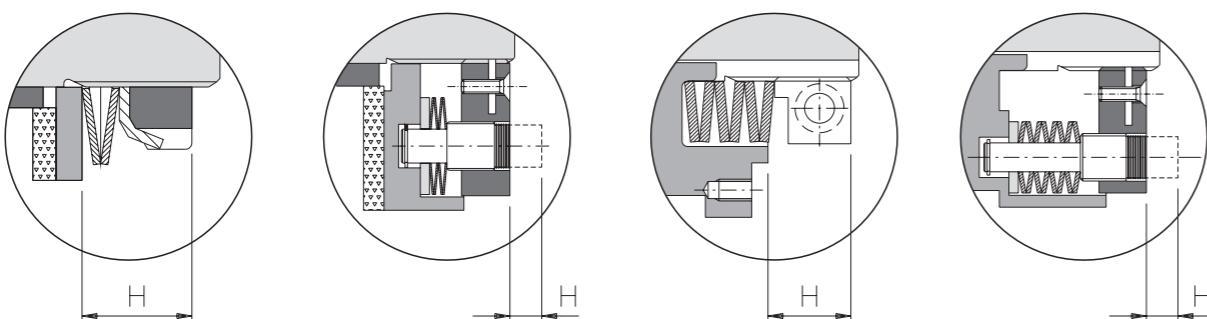

TORQUE LIMITERS (SAFETY COUPLINGS) - CLUTCHES: additional information

CALIBRATION SYSTEM WITH "H" DIMENSION

The transmitted force of a torque limiter can be determined with one or more axial springs and different forces, depending on how they are combined. Efficient controls on all components make it possible to realize tables for simple, easy and most of all, quick torque limiter calibration, without any need of special equipment.

Search in the technical catalogues, in the table "torque calibration" the value that is closest to the required torque of the selected torque limiter size and spring combination. Find the related value of "dimension H". Alter the spring pressure by adjusting the ring nut until you reach "dimension H", the distance between nut ring and flange (see drawings). Finally, fix the nut ring by its locking mechanism. With this calibration system you obtain:

- Torque calibration without removing the torque limiter.
- Quick torque calibration.
- Avoid calculating and reading errors due to misinterpretation of drawings.
- Simple variation or reset of the torque.

EXAMPLES OF DETERMINING, REGULATING AND CALIBRATING A TORQUE LIMITER

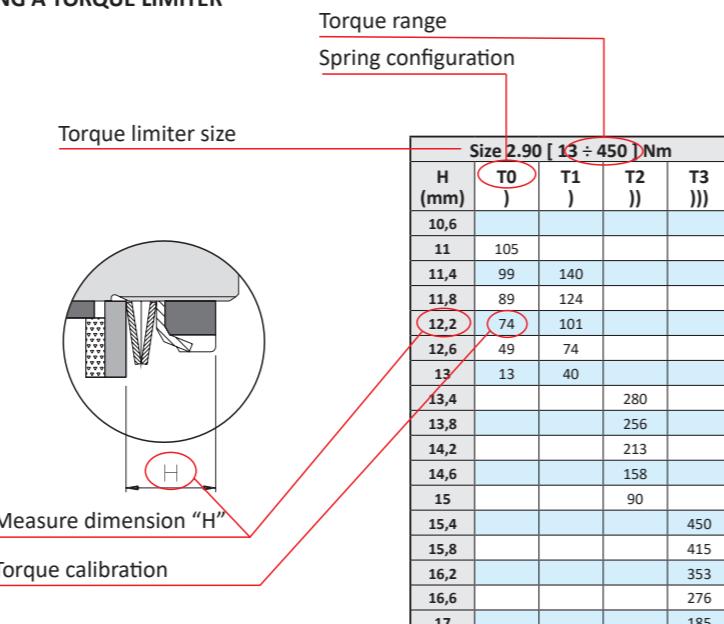

Electric motor: power = 7,5 Kw
Rpm = 1450
 f (safety factor) = 1,5

Use the following formula to get an idea of the intervention torque:

$$C = \frac{Kw \cdot f \cdot 9550}{Rpm} = \frac{7,5 \cdot 1,5 \cdot 9550}{1450} = 74 \text{ Nm}$$

Find in the technical catalogue (in this case DF) the required spring configuration and the relative dimension H for the selected torque limiter (in this case 2.90 DF), to have the desired torque (in this case springset T0 - dimension H 12,2 mm - torque 74Nm).

Please note: Due to the expansion coefficient and the load loss of all springs in general, the "dimension H" can vary slightly.

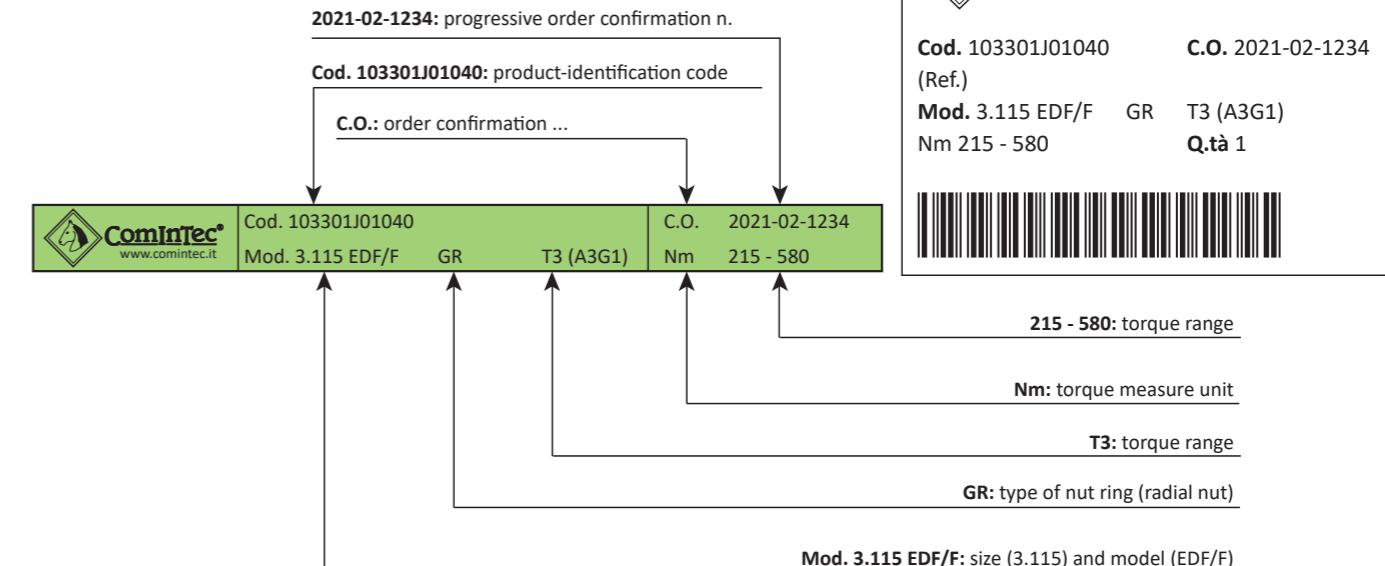

→ You can find all the calibration torque values by typing in "dimension H" on our website "www.comintec.it".

ComInTec® IDENTIFICATION

LABEL

The Company ComInTec uses a plastic label with indelibly printed information necessary to identify all product groups and production history. This information is also useful to order spare parts, repeat orders and to get product information. Explanation of the data:

Example:

MARKING

Example:

ComInTec® CERTIFICATIONS

- UNI EN ISO 9001:2015 certified company since February 1996

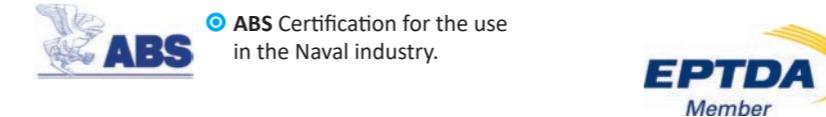

- Company and production "Made in Italy".

- ABS Certification for the use in the Naval industry.

- Patented
- Continuous product-research and development, some of them with Italian and European PATENT.

REACH

- Internal and external environment protection complying with directive, 2011/65/UE (RoHS), that forbids the use of harmful substances during the production process or in the endproduct, and complying with D.Lgs. 626/94 for security and health at work.

- Maximum attention to market requests for conformity with 2011/34/UE (ATEX) for use in potentially explosive environments.

- European Power Transmission Distributors Association (EPTDA). The largest organisation of distributors and manufacturers of power transmission and motion control products in Europe.

- REACH compliance (CE) n. 1907/2006

ASK FOR A PROJECT

Your needs are our priorities.

If you need help with a project, ask for assistance or advice from the experts at ComInTec.

Simply fill out this form and send it by e-mail to tecnico@comintec.com. Your request will be handled in the shortest time possible.

General information:

- Company name: _____
- City / State: _____
- Name / Surname: _____
- Title: _____

 PLEASE ALSO SEND, IF AVAILABLE, A DRAWING OR PHOTOGRAPH. IT CAN ASSIST US ENORMOUSLY IN HELPING US TO FULLY UNDERSTAND YOUR APPLICATION.

NOTES

74

NOTES

75

NOTES: on all groups is not always guaranteed the respect of the phase between the keyway and the connection holes.
In general for fixing screws/bolts supplied by ComInTec please observe the data provided in the catalogues or instruction sheets
respect correct tightening torques, for those not supplied (or not indicated) please respect the general mechanical data available
based on the grades used.

**Holes with small dimensions compared to the side of the torque limiter/coupling will have a lightening hole
(please consult our technical department).**

ComInTec Srl reserves the right to discontinue the production of any model and / or change specifications or dimensions at any
time without notice and without obligations.
The data reported in this catalog are indicative and not binding.
The torque values listed in the catalog refer to static tests performed under "normal condition".
These values may be subject to change, depending on the parameters of work and environmental conditions.

This catalogue supersedes all previous.

**For over 50 years ComInTec offers
high quality solutions through the
design and manufacture of:**

power transmission components
torque limiters
safety couplings
backlash free torque limiters
elastic couplings
disc couplings
backlash free couplings
variable speed pulleys
expanding pulleys
shaft collars
clamp collars

TORQUE LIMITERS

CLUTCHES

FLEXIBLE COUPLINGS

LOCKING RINGS

VARIABLE PULLEYS

used in the sectors

packaging
bottling
labelling
conveyors
machine tools
servo drive system
marine engineering
pump compressor
transportation system
heavy industry
printing
paper machinery
aerospace industry
wood working
door system
solar industry
